AVANGRID — SAP DIGITAL PRODUCTS TRANSFORMATION

Baseline & Diagnostic Phase • April 2026

Demand Map

AS-IS Current State of Digital Products Demand Flow

Across Applications (Carlos) and Customer Services (Kumar), demand enters through 6+ disconnected channels — no two teams share the same flow. This map exposes the gaps and defines what the Target Operating Model must standardize end-to-end.

NTT DATA — Consulting

19 slides

Version 1.0

Deck roadmap — five sections, grounded in Wave 1 Step 1 (Enablement): evidence first, interpretation second, recommendations last

SECTION 01
FRAMING

Slides 03 – 06

WHAT YOU'LL SEE

Why we are here. Executive summary. Methodology (Wave 1 Step 1).

HOW IT FEEDS

Sets the lens for every finding that follows.

SECTION 02
ORGANIZATION

Slides 07 – 10

WHAT YOU'LL SEE

Org context (nine sub-teams, two vacancies). Applications branch. SAP / Customer Services branch + CMP · UIL · NY · Digital CoE · Infrastructure detail.

HOW IT FEEDS

Names the players — drill-downs reference these teams one-by-one.

SECTION 03
AS-IS DRILL-DOWNS

Slides 11 – 16

WHAT YOU'LL SEE

Six deep-dives (GIS · Corporate · G&E · Global SAP · Smart Metering · Customer Services Apps) across 5 lifecycle stages × 4 lenses (Channels · Roles · Tools · Governance).

HOW IT FEEDS

Ground truth — every bottleneck and insight traces back to these cells.

SECTION 04
BOTTLENECKS

Slides 17 – 18

WHAT YOU'LL SEE

Eight bottlenecks — four per branch (Applications + Customer Services). Each card names stage, team, impact and evidence.

HOW IT FEEDS

Converts evidence into named risks — prioritized for TOM response.

SECTION 05
INSIGHTS

Slide 19

WHAT YOU'LL SEE

Seven structural issues across both branches — paired with the TOM response that resolves each.

HOW IT FEEDS

Exit-ramp into Step 2 (Define Lifecycle) of Wave 1.

HOW TO READ THIS DECK

Every slide carries a thin roadmap strip at the top — five pills, current section highlighted in navy. Read each slide bottom-up: action title states the conclusion, content is the evidence, takeaway is the "so what." Cross-references use format [Slide XX].

You are here → Section 01 (Framing). Next: the organization that generates the demand we are mapping.

Avangrid is consolidating SAP CoE and Applications into a single Digital Products organization — demand fragmentation is the structural risk the TOM must resolve

WHY WE ARE HERE

- Digital Products (formerly SAP CoE) is being re-founded under VP Vitor Cruz, merging Applications (Carlos Garbin) and Customer Services Apps (Kumar Jaladanki) into one ~50-FTE organization.
- Demand volume has grown 30–50% across SAP and Applications in the last 24 months — with no unified intake, classification, or prioritization model in place.
- Six champion interviews and two director-level sessions (Carlos, Stephanie & Kumar) surfaced six disconnected intake channels and five different prioritization logics.
- NTT DATA was engaged to diagnose the current state, design the Target Operating Model (TOM), and pilot it on one BRS project before scaling.

SCOPE & WORKING MODEL

- Two director branches in scope: IT Business Applications (4 teams, ~26 FTE) and Customer Services Apps (5 teams, ~24 FTE, 2 Sr. Manager vacancies).
- Five end-to-end stages assessed per team: Intake → Classification → Prioritization → Portfolio → Delivery.
- Baseline grounded in interview evidence (6 champions + 2 directors), not secondary documents — every finding is traceable to a named source.
- Wave 1 delivers: Baseline Report, Demand Map, Portfolio Landscape (SAP), Lifecycle v1.0, Jira Config v1.0, and a live BRS pilot.

This deck is the Demand Map — the AS-IS current-state evidence base that feeds the TOM design in Wave 1, Step 2

Digital Products runs nine sub-teams on six disconnected intake channels — with no shared prioritization logic and two Sr. Manager vacancies in Customer Services

GOVERNING THOUGHT — Fragmentation is structural, not local. Every team has a working answer for large, PDD-funded demand; no team has one for small and medium demand at scale. The TOM must standardize the end-to-end lifecycle across both director branches.

01 INTAKE & CLASSIFICATION

FINDING

6+ channels active (Jira, IT Now, RITM, SharePoint, Email, Word). G&E is fully email-driven; Corporate still uses Word docs for requirements.

SO WHAT

No single front door. Volumes and duplicates are invisible.

02 PRIORITIZATION & PORTFOLIO

FINDING

Each team applies a different logic — PDD, impact × users, criticality, "intrinsic common sense." Only Smart Metering uses a portfolio tool (PPM Now).

SO WHAT

Capacity cannot be reconciled across the branch. Strategic work loses to incident volume.

03 ORGANIZATION & DELIVERY

FINDING

Two Sr. Manager vacancies in Customer Services (CRM & Contact Center Ops, SAP & CS Architecture). Delivery leans heavily on Accenture + SWF + vendor muscle.

SO WHAT

Leadership gap + vendor concentration create structural risk for scaling.

The rest of this deck walks the evidence per team — then consolidates bottlenecks and structural insights into the TOM scope

This Demand Map is the output of Step 1 (Enablement) — grounding the baseline through champion interviews and portfolio mapping before lifecycle design

Step 01
Enablement
Where are we starting from?

Step 02
Define Lifecycle
How should we work?

Step 03
Design Tool Ecosystem
What supports the process?

Step 04
Pilot Execution (BRS)
Does it work in reality?

Step 05
Learn & Adjust
What needs refinement?

STEP 1 — ENABLEMENT · ZOOM IN

WHAT WE DID

Prior Materials Review

Reviewed 40+ prior artifacts: SAP CoE decks, IT CS Operating Model, P&S Playbook, DTO NextGen, Org Chart, Competency Framework.

Champion Stakeholder Interviews

Six 1:1 champion interviews (GIS, Corporate, G&E, Global SAP, Smart Metering) + two director sessions (Carlos; Stephanie & Kumar). Captured intake channels, tools, roles, pain points and aspirations per team.

Portfolio Assessment

Mapped demand typology per team across the 5 lifecycle stages. Reconciled interview evidence with the RFI workbook and the validated Miro board.

DELIVERABLES OF STEP 1

- Baseline Report
- Demand Map (this deck)
- Project Portfolio Landscape — SAP
- Champion Interview Log (6 interviews)
- Cross-Project Comparison (P&S / DTO / Digital CoE)

The Demand Map is the evidence backbone — Step 2 (Define Lifecycle) consumes these findings to draft the Lifecycle v1.0, Demand Typology and Roles & RACI

This map traces every demand from source to execution across two director branches and their sub-teams

THE 5 END-TO-END STAGES

01 — INTAKE
Channels & Sources — how demand enters

02 — CLASSIFICATION
Type, size, urgency — how demand is sorted

03 — PRIORITIZATION
Scoring & criteria — how decisions are made

04 — PORTFOLIO
Governance & decision — how it's owned

05 — DELIVERY
Execution & flow — how it's built

READING THE CELLS

- Process works — formal channel + clear ownership
- Partial gap — informal or inconsistent
- Critical gap — no formal process or tool
- Not observed — data not captured in interviews

ORGANIZATIONAL UNITS COVERED

Applications branch — Director Carlos Garbin

GIS (George) • Corporate (Amit) • G&E (Andrew/Bruno) • Global SAP (Michael/Vanessa)

Customer Services branch — Director Kumar Jaladanki

Smart Metering (Iram/Vincent) • Branch overview from Kumar + Stephanie

The map is organized as 5 area swimlanes × 5 process stages — every cell is a claim grounded in interview evidence

Digital Products spans two director branches (~50 FTE) across nine sub-teams — with two Sr. Manager positions currently vacant

Vitor Cruz
VP — IT Business Solutions Delivery

Carlos Garbin — Director IT Business Applications (~26 FTE)

Bruno Moreto	Electric & Gas Ops	7 FTE	*G&E Champion: Andrew McGibbon*
George Porto	GIS & OSG	6 FTE	*GIS Champion: George Porto*
Sarath Garikapati	Corporate Applications	8 FTE	*Corporate Champion: Amit Patel*
Vanessa Colombo	Global SAP — Iberdrola FI, PO, Budget (Spain)	5 FTE	*Global SAP Champion: Michael Dubois*

Kumar Jaladanki — Director Customer Services Apps (~24 FTE)

Ivelisse Velazquez	FICA, Billing & Collection	8 FTE	*Scope: Customer billing operations*
TBD (vacant)	CRM & Contact Center Ops	4 FTE	*Org vacancy — leadership gap*
Vincent Lam	Device & Metering (Avangrid)	8 FTE	*Smart Metering Champion: Iram Chowdhury*
Open (vacant)	SAP & CS Architecture	2 FTE	*Org vacancy — leadership gap*
Nagi Reddy	SAP Basis	2 FTE	*Scope: Platform / infrastructure*

Area champion identified (5) | **Operational scope documented (2)** | **Org vacancy — leadership gap (2)**

Two Sr. Manager vacancies leave Customer Services running at 60% leadership coverage — a structural risk the TOM must address before scaling

Applications runs Avangrid's non-SAP operational backbone — four teams supporting Electric & Gas, GIS, Corporate and Iberdrola Global SAP

BRANCH 1 — IT BUSINESS APPLICATIONS · Director: Carlos Garbin · ~26 FTE · 4 teams

NATURE OF WORK

Operational continuity + regulated change

- Keep the lights on — break/fix is the dominant pattern (GIS, G&E, Corporate).
- Large demand planned yearly via PDD; small/medium demand handled ad-hoc.
- Regulatory and employee-facing systems (Corporate) run under continuous compliance pressure.
- Version upgrades (Projectwise, Microstation) gate-kept by Third-Party Risk assessment.

APPLICATIONS IN SCOPE

Four technology domains under Carlos

- GIS & OSG — SAP HANA, ARCFM, GIS web apps, data replication, SWF platform (George Porto, ~6 FTE).
- Electric & Gas Ops — 70–90 apps, android/tablets, doc viewer, 811 gas lines (Bruno Moreto + Andrew McGibbon, ~7 FTE).
- Corporate Applications — 5-6 PMs, 2 tech leads, corporate + network apps, SWF tooling (Sarath + Amit, ~8 FTE).
- Global SAP (Iberdrola) — FI, PO, Budget — Spain-side SAP module support (Vanessa + Michael, ~5 FTE).

PRIORITIES TODAY

Break/fix first, regulatory second, strategic last

- GIS: keep the lights on; team & SWF resource management; future technology roadmap.
- Corporate: regulatory and employee-facing systems — always priority; continuous new requirements.
- G&E: ProjectWise + Microstation upgrades; third-party risk interface; business case approvals (slow).
- Global SAP: incident volume dominates — strategic projects slip; 1-year hiring lag amplifies load.

INTERACTIONS & WAY OF WORKING

Inside-IT + vendor + business triangulation

- Inside Applications: GIS ↔ G&E (shared SAP/GIS data); Corporate ↔ all teams (shared PMs).
- With SAP branch: Global SAP ↔ Kumar's Local SAP (Billing, FICA); P&T is the intermediary with Business.
- With vendors: Accenture (Global SAP + Corporate), SWF / Software Factory (all teams), business vendors (G&E).
- Tools mix: Jira (misc), IT Now (incidents), PDD (large), SharePoint + Teams + OneNote + Email (PM).

Applications carries the structural legacy of Avangrid's IT stack — fragmentation here maps directly to the 4 intake bottlenecks surfaced later in this deck

Customer Services Apps serves 7 OPCOs across three BRS groups — with Local SAP (Billing, CRM, FICA, Metering) as the operational core and two Sr. Manager vacancies

BRANCH 2 — CUSTOMER SERVICES APPS · Director: Kumar Jaladanki · ~24 FTE · 5 teams (2 Sr. Manager vacancies)

NATURE OF WORK

Customer-facing SAP + metering + contact center

- Local SAP (Avangrid US) — Billing, FICA, CRM, Metering — distinct from Global SAP (Iberdrola Spain).
- Demand split across BRS (business), PMO (Travis — large projects) and IT-funded (Kumar's teams).
- Incidents + small/medium demand dominate volume; large projects run via annual PDD.
- Software Factory (SWF) executes; Accenture supports incidents + projects.

BRS / OPCO LANDSCAPE

3 BRS groups representing 7 operating companies

- BRS UIL — United Illuminating, SCG, CNG, BGC (Connecticut cluster).
- BRS CMP — Central Maine Power (Maine operations).
- BRS NY — NYSEG + RGE (New York cluster).
- Plus Digital CoE (customer apps / websites) and Call Center (contact interactions — Kumar).
- Each OPCO competes for the same IT capacity — multi-OPCO prioritization is a daily pressure.

TEAMS UNDER KUMAR

5 sub-teams, heterogeneous maturity

- Ivelisse Velazquez — FICA, Billing & Collection (~8 FTE).
- Vincent Lam — Device & Metering (Iram Chowdhury / Smart Metering sits here, ~8 FTE).
- Nagi Reddy — SAP Basis (platform / infrastructure, ~2 FTE).
- TBD (vacant) — Sr. Manager CRM & Contact Center Ops (~4 FTE) — leadership gap.
- Open (vacant) — Sr. Manager SAP & CS Architecture (~2 FTE) — leadership gap.

WAY OF WORKING & INTERACTIONS

Fragmented intake + vendor-heavy delivery

- Small/medium demand via Jira; large via PPM Now (only Smart Metering consistently).
- Incidents: IT Now; Minor requests: RITM; Major projects: SharePoint + Teams.
- Interactions: Kumar ↔ Travis (PMO for large projects); ↔ BRS leads (business demand); ↔ Vanessa (Global SAP).
- Vendor concentration: Smart Metering is 100% vendor-delivered (requirements + code); other teams rely on Accenture + SWF.

Customer Services Apps carries both business-facing complexity (3 BRS × 7 OPCOs) and structural gaps (2 Sr. Manager vacancies, vendor-heavy delivery) — the TOM must address both

The SAP branch serves five distinct business landscapes — three regional BRS groups plus Digital CoE and Infrastructure — each with its own demand profile and governance cadence

SAP / CUSTOMER SERVICES APPS — LANDSCAPE BREAKDOWN

BRS UIL — Connecticut cluster

UI, SCG, CNG, BGC — 4 OPCOs

- United Illuminating (UI) — CT electric distribution.
- Southern Connecticut Gas (SCG).
- Connecticut Natural Gas (CNG).
- Berkshire Gas Company (BGC) — Western MA gas.
- Customer services SAP footprint: Billing, FICA, CRM.
- VP Customer Service → BRS UIL lead.

BRS CMP — Maine

Central Maine Power — 1 OPCO

- Central Maine Power (CMP) — ME electric distribution.
- Dedicated BRS — distinct regulatory cadence vs. UIL and NY.
- Customer services SAP footprint: Billing, FICA, CRM.
- VP Customer Service → BRS CMP lead.
- Annual PDD demand process + small/medium via Jira.

BRS NY — New York cluster

NYSEG, RGE — 2 OPCOs

- NYSEG — upstate NY electric & gas.
- RGE — Rochester Gas & Electric.
- Customer services SAP footprint: Billing, FICA, CRM, Metering (Smart Metering heaviest here).
- VP Customer Service NY → BRS NY lead.
- Shared AMI / metering program drives device & metering volume.

DIGITAL CoE — Customer digital experience

Customer-facing apps, websites, mobile — Kumar directly

- Kumar owns Digital CoE directly (customer interaction layer).
- Develops solutions for the customer: portal, mobile apps, websites.
- Interfaces with Contact Center + Call Center (customer interaction).
- Runs separately from BRS-driven back-office demand — closer to CX journeys than to SAP modules.
- Connects to P&T Process & Technology (field operators) and Renewables CoE patterns already mapped.

INFRASTRUCTURE — SAP Basis / platform

Nagi Reddy — SAP Basis (~2 FTE)

- Platform + infrastructure services supporting all SAP modules (FICA, Billing, CRM, Metering).
- Shared service across BRS UIL / CMP / NY — horizontal layer.
- On-prem = IT owned (platform side).
- Version upgrades, environment moves, third-party risk interface.
- Level-1 / small regulatory demands (Jira as intake + managing, forms standard) surface here before routing.

Any TOM recommendation on Customer Services demand must respect three regional cadences (UIL, CMP, NY), one customer-facing track (Digital CoE), and one horizontal platform (Infrastructure) — single model, five consumption patterns

GIS balances break/fix urgency against yearly PDD planning — with no formal channel for small demand

GIS & OSG — team led by George Porto (Sr. Manager)

	01 INTAKE	02 CLASSIFICATION	03 PRIORITIZATION	04 PORTFOLIO	05 DELIVERY
	PARTIAL	PARTIAL	PARTIAL	OK	OK
CHANNELS · WHO SENDS	Jira (misc. work) + Email / Meetings (small demand) + IT-Now (daily break/fix)	Small: email / Jira / IT-Now routed by type; Large: yearly PDD process	Business drives prioritization; P&T is the face for small demand	PDD-approved portfolio; no dedicated portfolio tool	Internal team for break/fix; SWF brought in for resource impact
ROLES	Business users open tickets; George's team receives	George + team classify; PDD committee for large	"Impact to most users" rule (George); PDD approvers for large	Informal PM — George manages via OneNote / Teams / spreadsheets	GIS team + Software Factory (shared server infra: SAP HANA, ARCFM)
TOOLS	Jira · Email · Meetings · IT-Now (RITM)	No single tool — Jira tags, PDD workbook	Spreadsheet-based; no scoring tool	OneNote + Teams + Spreadsheets (informal) + PDD (large)	Jira (internal) + SWF process (vendor capacity)
GOVERNANCE & METRICS	No SLA on small demand; no volume tracking	No classification rule below PDD threshold	"Highest impact / most users" — heuristic, not scored	PDD governance works for large; no below-threshold governance	SWF engagement tracked ad-hoc; no KPIs per release

KEY PATTERNS — WHAT THE FINDINGS REVEAL

- GIS treats "small demand" and "break/fix" as interchangeable — volume grows, prioritization logic doesn't scale

SUPPORTING QUOTE

"I prioritize things that have the highest impact to the most users. In most cases these are break/fix requests" — George Porto

GIS has a working large-project process (PDD) but relies on email + meetings for small demand — capacity risk as volume grows

Corporate runs demand through Jira, Confluence and Word — standardization gap despite the highest regulatory pressure

Corporate Applications — team led by Sarath Garikapati (Sr. Manager) · Champion: Amit Patel (Tech Lead, 5-6 PMs + 2 Tech Leads)

	01 INTAKE	02 CLASSIFICATION	03 PRIORITIZATION	04 PORTFOLIO	05 DELIVERY
	PARTIAL	GAP	PARTIAL	OK	PARTIAL
CHANNELS · WHO SENDS	PM via Jira + Confluence; Word docs for business requirements	PDD drives for large; no explicit model for small/medium	PDD is the driver; regulatory is treated as standing priority	PDD-approved portfolio; overlap visible in Confluence	Internal + Vendor split; regulatory-driven release cadence
ROLES	Business analysts send requirements; PMs own Jira intake	5-6 PMs + 2 Tech Leads classify (central PM pool sits here)	PMs + business leadership — regulatory always lifted	PMs track Jira; overlap visible but not resolved upstream	Internal team + SWF + vendors for specific modules
TOOLS	Jira · Confluence · Word docs	Jira labels + PDD workbook	No scoring tool — regulatory tag = priority	Confluence + PDD; no consolidated portfolio tool	Jira + Confluence; SWF for vendor capacity
GOVERNANCE & METRICS	No consolidated intake funnel; Word breaks digital trail	No deduplication between overlapping PDDs	Regulatory urgency is exception-driven, not scored	PDD approvals govern; below-threshold demand untracked	One-year plan + recurring training; no release KPIs

KEY PATTERNS — WHAT THE FINDINGS REVEAL

- Word-document requirements betray a pre-agile posture — downstream Jira adoption is superficial, not structural

SUPPORTING QUOTE

"Regulatory and Employee — not only one year plan and training, coming with new requirements that are always a priority" — Amitkumar Patel

Corporate absorbs regulatory volatility through PDD — but Word-doc intake and overlap between projects create duplication and rework exception

G&E is the only area with NO formal digital intake — every request arrives via email from business or vendor

G&E — sub-scope within Electric & Gas Operations Products (team led by Bruno Moreto, Sr. Manager) · Champion: Andrew McGibbon (70-90 apps supported)

	01 INTAKE	02 CLASSIFICATION	03 PRIORITIZATION	04 PORTFOLIO	05 DELIVERY
	GAP	GAP	GAP	GAP	GAP
CHANNELS · WHO SENDS	EMAILS only — from business AND from vendor; no ticketing	Ad-hoc by demand nature; depends on upgrade type	Andrew's internal call — operational = urgent	Vendor sets its own timeline; upgrades need budget/time eval	Vendor-led delivery; competing priorities without triage
ROLES	Business + vendor send email → Andrew receives	Andrew alone classifies — no second reviewer	Andrew prioritizes; cyber / legal / third-party weighted	Vendor owns timeline; Andrew tracks manually	Vendor + Andrew; no internal release role
TOOLS	Email (Outlook) — no Jira, no IT-Now, no RITM	Email threads as the classification evidence	No scoring tool — judgment call	No portfolio tool in use	No delivery tooling — vendor runs its own stack
GOVERNANCE & METRICS	Zero digital trail; volumes unknown; single-person dependency	No written rule; no audit trail	Key-person risk — Andrew = only router	Third-Party Risk gates upgrades; interface is slow	Budget / time tension on every upgrade; no KPIs

KEY PATTERNS — WHAT THE FINDINGS REVEAL

- Vendor-led model creates structural dependency: Avangrid cannot estimate or schedule its own work — budget/timeline are exogenous

SUPPORTING QUOTE

"I receive requests/input from the business or from the vendor" — Andrew McGibbon (via email)

G&E is the canary of intake fragmentation — zero digital trail, every decision is individual and unreproducible; must be the first area addressed in the TOM

zero auditability

Global SAP — Iberdrola has the most mature channel taxonomy — but is trapped by incident overload

Global SAP — Iberdrola environment (Spain) — team led by Vanessa Colombo (Manager IT Apps Global SAP) covering FI, PO, Budget control · Champion: Michael Dubois (35 yrs in business, now IT)

	01 INTAKE	02 CLASSIFICATION	03 PRIORITIZATION	04 PORTFOLIO	05 DELIVERY
	OK	OK	GAP	PARTIAL	PARTIAL
CHANNELS · WHO SENDS	IT Now (Incidents) · RITM (Minor) · Jira (Small Demands) · SharePoint + Teams (Projects)	Incidents→IT NOW · Small→JIRA · Minor→RITM · Major→SharePoint	#1 Incidents always first; #2 Small + Major; P&T prioritizes projects	PDD for major projects; SharePoint is project home	Accenture + SWF (Software Factory) run delivery
ROLES	Business / Accenture open tickets; Vanessa's 5-FTE team receives	Classification is tool-driven — channel = class	Michael + leadership call incidents first; P&T helps with projects	Michael owns weekly incident review (Thursday, with Accenture)	Accenture = incidents; SWF = projects; P&T = intermediary
TOOLS	IT Now · IT Now RITM · Jira · SharePoint · Teams	IT Now + Jira + SharePoint (by channel)	No scoring tool — incidents-first rule	SharePoint (projects) + PDD (approval) + Thursday incident meeting	Accenture's delivery stack + SWF pipeline
GOVERNANCE & METRICS	Strongest channel taxonomy in the org — but tuned for incidents	Channel taxonomy = de-facto classification	Incident volume caps strategic capacity ("entire team on incidents")	Weekly Accenture incident review governs incidents; projects via PDD	Knowledge transfer loss at every turnover — 1-year hiring lag

KEY PATTERNS — WHAT THE FINDINGS REVEAL

- Channel taxonomy is the strongest in the organization — but it was designed around incidents, not strategic demand

SUPPORTING QUOTE

"Balance all the demands: Incidents, Small Demands, Major projects (PDD). Limited resources — 1 year to hire someone" — Michael Dubois

Global SAP's channel taxonomy is the closest to a target state — but the incident flood caps strategic capacity; reducing incident load is the leverage point

concentrate outside Avangrid

Smart Metering is the only area fully vendor-delivered with PPM Now + Confluence — but relies on "intrinsic common sense" for prioritization

Smart Metering — sub-scope within Device & Metering (team led by Vincent Lam, Sr. Manager — Customer Services branch) · Champion: Iram Chowdhury (PM, works with Sarath; also Andrew's group)

	01 INTAKE	02 CLASSIFICATION	03 PRIORITIZATION	04 PORTFOLIO	05 DELIVERY
	PARTIAL	OK	PARTIAL	OK	GAP
CHANNELS · WHO SENDS	Small demands via email (IT Now); normal flow — not seasonal	Incidents → IT Now template; requirements usually clear	Criticality + deadline + application priority	PPM Now (large) + Jira + Confluence (PM-to-PM)	100% vendor-delivered portfolio — vendors = consultants + code
ROLES	Business opens IT Now / email; Iram (PM) receives	Iram + team classify by template; vendor tech lead joins	Iram prioritizes on deadline + criticality — "intrinsic common sense"	Iram + manager (weekly); vendor PMs help PMs prioritize	Vendors do requirements AND code; Avangrid = product owner
TOOLS	Email · IT Now (template) · occasional RITM	IT Now template = primary classification	No scoring tool — judgment + weekly cadence	PPM Now + Confluence + Jira — most mature stack in scope	Vendor stack for build; Confluence for portfolio documentation
GOVERNANCE & METRICS	Volumes OK (not seasonal); "usually no urgent requests"	Template-based → consistent, but no cross-team view	"Intrinsic common sense" = tribal knowledge risk	Weekly meeting governs; PPM Now = only portfolio instance in CS branch	If vendor exits, execution knowledge is lost — 100% dependency

KEY PATTERNS — WHAT THE FINDINGS REVEAL

- Only area using PPM Now + Confluence — the stack is right, but it exists as one-team exception rather than branch standard

SUPPORTING QUOTE

"All portfolio in vendor. Vendors are the consultants for the work — getting requirements on tech side, steps to follow and do the code also — all custom applications" — Iram

Smart Metering is the most tool-mature area — but full vendor dependency and intuitive prioritization create knowledge and governance risk fails on leadership transition

Customer Services runs 5 sub-teams with heterogeneous maturity — only Smart Metering exhibits a mature portfolio practice; the rest route demand director-level

Customer Services Apps — Kumar Jaladanki (Director) — 5 sub-teams: FICA/Billing (Ivelisse), CRM & Contact Center (vacant), Device & Metering (Vincent), SAP & CS Architecture (vacant), SAP Basis (Nagi)

	01 INTAKE	02 CLASSIFICATION	03 PRIORITIZATION	04 PORTFOLIO	05 DELIVERY
	GAP	PARTIAL	GAP	GAP	PARTIAL
CHANNELS · WHO SENDS	Email + IT Now (Metering); Jira (small-med); no shared branch channel	Incidents→IT Now template; Large→Travis PMO; Small/Med→Jira	Criticality + deadline (Metering); director-level calls elsewhere	PPM Now (Metering only); no branch-wide tool	SWF + Accenture + Vendors (100% in Metering)
ROLES	Business / BRS / OPCOs open varied channels; 5 Sr. Managers (2 vacant) receive	By sub-team (Metering/FICA/CRM/Basis); Travis PMO for large	Kumar + sub-team managers; "intrinsic common sense" (Iram)	Travis PMO (large) + sub-team managers (small); no portfolio lead	SWF runs projects; PM + SAP Architect roles in place (large)
TOOLS	IT Now · Email · Jira · no cross-channel funnel	IT Now template + Jira labels + PPM (large)	Forum criteria (strategic / ops / regulatory / size) — applied by sub-team	PPM Now (Metering) · SharePoint · Confluence	SWF delivery pipeline · vendor stacks (per sub-team)
GOVERNANCE & METRICS	2 Sr. Manager vacancies (CRM & Contact Center, SAP & CS Architecture)	Triple routing: Travis PMO / BRS / IT-funded — blurs accountability	No formal director-level model; regulatory overrides size	7 OPCOs compete for the same IT capacity — multi-OPCO contention	Heavy vendor concentration; single-team mature practice (Metering)

KEY PATTERNS — WHAT THE FINDINGS REVEAL

- Three parallel ownership tracks without a routing rule — Travis PMO for large projects, BRS for business-funded work, IT-funded for Kumar's teams — the same request can land in any of
- PM + SAP Architect roles are in place for large projects (Kumar confirmed) — the gap is not in roles, it's in branch-wide portfolio visibility

SUPPORTING QUOTE

"Who is in charge of what — 3 people can run the payment jobs for example. Resource allocation — multiple OPCOs competing by capacity" — *Kumar + Stephanie*

Smart Metering's model (PPM Now + weekly PM meeting + 100% vendor delivery) is the only mature practice in Kumar's branch — it is also the blueprint and the warning sign

Four Applications bottlenecks concentrate demand risk — covering intake, prioritization, portfolio and classification

APPLICATIONS BRANCH — Carlos Garbin

01

Bruno Moreto's team • STAGE: Intake

G&E Email-Only Intake

Every request to Andrew arrives via email from business or vendor. No ticket, no queue, no SLA — each decision is individual and unreproducible.

IMPACT

Unknown volume. No capacity forecast possible. Single-person dependency on Andrew.

"I receive requests/input from the business or from the vendor" — Andrew McGibbon

02

Vanessa Colombo's team • STAGE: Prioritization

Global SAP Incident Flood

Incidents outrank all other demand for Iberdrola SAP. Entire team can be consumed by incident work, blocking strategic projects.

IMPACT

Capacity trapped in BAU. Major projects (PDD) slip. Knowledge transfer lost at each turnover event.

"Sometimes entire team is focusing on incidents" — Michael Dubois

03

George Porto's team • STAGES: Intake + Portfolio

GIS Informal PM Stack

Small demand routes through email, meetings and IT-Now. Project management relies on OneNote + Teams + spreadsheets — no formal portfolio tool below PDD.

IMPACT

Small + break/fix demand (~60-70% of actual work) is untracked. Capacity consumed by unmeasured flow.

"My team uses Jira for misc. work... OneNote, Teams and Spreadsheets to manage" — George Porto

04

Sarath Garikapati's team • STAGE: Classification

Corporate Project Overlap

Word-document requirements + Jira + Confluence fragment the intake. PDD drives classification but doesn't deduplicate — overlapping projects chase similar outcomes.

IMPACT

Rework, duplicated effort, and unreconciled regulatory pressure treated as chronic urgency.

"PDD is the driver. Lots of overlapping projects" — Amit Patel

These four bottlenecks span all four Applications teams — each is a symptom of the same underlying fragmentation the TOM must address

Four Customer Services bottlenecks — leadership gaps, portfolio blindness, vendor concentration and multi-OPCO contention

CUSTOMER SERVICES BRANCH — Kumar Jaladanki

05

Kumar's branch • STAGES: Classification + Prioritization

Customer Services Leadership Gap

Two Sr. Manager positions vacant (CRM & Contact Center Ops, SAP & CS Architecture). Prioritization defaults to director level across Billing, CRM, Metering and Basis.

IMPACT

No shared prioritization logic across 5 sub-teams. Branch-level demand view is a structural blind spot.

"Who is in charge of what — 3 people can run the payment jobs" — Kumar + Stephanie

06

Kumar's branch • STAGES: Portfolio + Delivery

No Branch-Wide Portfolio Tool

PPM Now exists only in Smart Metering. Travis PMO handles large projects without a consolidated view of Billing / CRM / Metering / Basis portfolios.

IMPACT

Sub-team portfolios are disconnected. Capacity + priorities cannot be reconciled across the branch.

"No tool to support portfolio management... No tools or process to manage delivery of vendors"

07

Vincent Lam's team • STAGE: Delivery

Smart Metering Vendor Concentration

100% of the Smart Metering portfolio is vendor-delivered. Vendors do requirements AND code. All custom applications. "Intrinsic common sense" is the prioritization rule.

IMPACT

If the vendor exits, execution knowledge is lost. Avangrid has no native build capability in this sub-team.

"All portfolio in vendor. Vendors are consultants for the work" — Iram Chowdhury

08

Kumar's branch • STAGE: Intake + Prioritization

Multi-OPCO Capacity Competition

7 business OPCOs compete for the same Customer Services IT capacity. Demand splits across Travis PMO / BRS / IT-funded — triple routing for the same request.

IMPACT

Ad-hoc capacity allocation. Ownership ambiguity creates delivery risk and prolongs leadership vacancies' impact.

"Resource allocation — multiple OPCOs competing by capacity" — Kumar + Stephanie

Kumar's branch carries both structural (leadership) and operational (tooling + vendor) bottlenecks — the TOM must address all four simultaneously

Seven structural issues surface — no single-area fix resolves them; the TOM must standardize end-to-end

01 — Intake Fragmentation

6+ disconnected channels (Jira, IT Now, RITM, SharePoint, Email, Word). No single front door.

→ *TOM: unified intake layer with tool-of-record per demand type.*

02 — No Shared Prioritization Model

Each area uses different criteria — PDD, impact×users, criticality, operational urgency, common sense.

→ *TOM: value-based scoring framework (ties to existing "Value Framework V1.0" ambition).*

03 — Portfolio Tooling Vacuum

5 of 6 units have no portfolio tool. Only Smart Metering uses PPM Now.

→ *TOM: scale PPM Now (or equivalent) across all Digital Products areas + IT CS.*

04 — Vendor Governance Gap

No process to manage vendor delivery. Vendors estimate, set timelines, and own Smart Metering end-to-end.

→ *TOM: vendor performance framework + NTT-led estimation sanity check.*

05 — Governance Forum Coverage

5 recurring forums exist — but Manager Check-in participants are still TBC; no forum covers portfolio-level decisions.

→ *TOM: add a portfolio steering cadence and validate forum scope.*

06 — Taxonomy & Thresholds Undefined

"Small" vs "Medium" vs "Large" is subjective; each team decides. No hours / $ / complexity threshold exists.

→ *TOM: define objective classification thresholds — prerequisite for prioritization scoring.*

07 — Project vs Product Lens Missing

Demand is organized by application silo, not by Value Stream. IT requests don't trace to business OKRs.

→ *TOM: introduce Value Stream mapping — move from Project to Product operating model.*

Next step: consolidate these 7 issues into the Baseline Report and carry them forward to the Target Operating Model design
