Stakeholder Interview - Vitor

Vitor — Strategic Discovery Canvas

Stakeholder Conversation | 30 min | Guiding Drivers × Existing Assets × Projects–Demand Link

Guiding Drivers — What is Value?

The north star for Digital Products — aligned with what the business needs

WHAT IS VALUE?

In your own words,
what does 'value' mean to you?

DRIVERS

CONSOLIDATED DEFINITION OF VALUE (agreed with Vitor)

Review of Existing Assets

What the 4 other projects already built — the reuse menu

P&S / P&T — Flight Level Kanban Governance

P&S / P&T — Flight Level Kanban Governance

3-tier governance model with Portfolio → Program → Project Kanban boards. 4-phase E2E lifecycle: Discovery → Materialization → Creation → Ongoing.

Flight Level 3 — Portfolio

Strategic direction. Portfolio Manager prioritizes EPICs by business value and OKR alignment. Demand enters via Shark Tank and Portfolio Committee.

Portfolio Backlog → Discovery → Ideation → Solutioning → Done

Swimlanes: High Risks & Blockers · High Value · Regulatory · OKR's & Strategic Goals Forums: Big Room Planning (quarterly) · Portfolio Committee (monthly)

Flight Level 2 — Program

Tactical coordination. Programs break EPICs into features and plan releases. Epics and Solutions in flight.

Program Backlog → Work In Progress → Discovery → Shark Tank → Done

Swimlanes: Program A · Program B · Program C Forums: Program Sync (bi-weekly) · Replenishment

Flight Level 1 — Project

Operational execution. Day-to-day delivery by teams using Kanban boards per project. User Story / Task level.

Backlog → In Progress → QA → Deploy → Done

Forums: Daily Standup · Sprint Review · Retrospective

E2E Lifecycle Phases

Phase 0: Discovery	Phase 1: Materialization	Phase 2: Creation	Phase 3: Ongoing
Research · Understanding · Problem Statement · Inspiration Gate	Ideation · Validation · Solution Proposal	Project Book · Budget Release · Resourcing	Launch · PoC/MVP · Build · Testing · Deploy
Gate: GO/No-Go → Shark Tank	Gate: Portfolio Committee Approval	Gate: Budget Release Gate	Gate: Health Dashboard Review

Digital CoE — Discovery-Delivery Dual Board

Digital CoE — Discovery-Delivery Dual Board

Two separate Kanban boards (Discovery + Delivery) connected by feedback loops. Strategic Initiatives Funnel with Lean Business Case. 3-tier governance.

Portfolio Governance — 3 Tier Model

Portfolio (Initiative) → Strategic. Program (Feature/Epic) → Tactical. Delivery (User Story) → Executional. Alignment, predictability, accountability.

Strategic Initiatives Funnel → Lean Business Case → PRD → Quarterly Program Plan

Forums: Portfolio Learn Cycle (quarterly: 30 min past, 30 min future)

Discovery Board (Upstream)

Structured discovery workflow. Measures Cycle Time per phase and Discovery Success Rate. Tools: Ziflow, Maze, Figma, Monday.

Opportunity → Ideation → Tech Feasibility → Design → Biz Signoff → Done

Forums: Discovery Review · Feedback Loop from Delivery → Discovery

Delivery Board (Downstream)

Sprint-based delivery. 2-week time-boxed cycles. Sprint Report Canvas tracks baselines across cycles. Agile Master hygiene checklist.

Sprint Backlog → In Progress → QA → Done / Deployed

Forums: Sprint Planning · Daily · Sprint Review · Retrospective

E2E Lifecycle Phases

Discovery Upstream	Feedback Loop	Delivery Downstream	Portfolio Review
User Research · Ideation · Prototyping · Validation	Delivery insights → Discovery · Real-world data → Refinement	Backlog Refinement · Development · Testing · Deployment	Learn Cycle · Strategic Realignment · Next Quarter
Gate: PRD + Lean Business Case	Gate: Continuous (not gated)	Gate: Sprint Review + DoD	Gate: Quarterly Portfolio Learn Cycle

Infrastructure — Team Topologies + Phased Deployment

Infrastructure — Team Topologies + Phased Deployment

Team Topologies framework defines structural relationships. Phased rollout: Pilot (1 team) → Expansion (7+ teams) → Optimization. Per-unit-served investment model.

Team Topologies Framework

4 team types with 3 interaction modes. Selection depends on volume/frequency of demand, reuse of deliverable, and current capabilities.

Stream-Aligned → Enabling Team → Platform Team → Complicated Subsystem

Swimlanes: Collaboration · X-as-a-Service · Facilitating

Forums: Interaction mode defines how teams relate structurally

Deployment Methodology

Rollout-iterative strategy based on experience. Learn from each phase before expanding. Sapiens Learning Cycles for implementation.

Assessment (ODAS) → Preparation → Kanban Rollout → Portfolio Design → Stabilization

Forums: Sapiens Learning Cycles · Coaching Sessions · Flow Metrics Review

E2E Lifecycle Phases

Pilot (1 team)	Learn & Measure	Expansion (7+ teams)	Optimization
ODAS Assessment · Team Blueprint · Kanban Design · Close Coaching	Lead Time · Cycle Time · Throughput · Team Health	Sapiens Learning Cycle · Team Coaching · Knowledge Transfer	Portfolio Roadmap · Investment Model · Continuous Improvement
Gate: Flow Metrics Baseline	Gate: Results Report	Gate: Expansion Readiness	Gate: Maturity Assessment

Renewables DTO — Lean Kanban 4-Pillar Model

Renewables DTO — Lean Kanban 4-Pillar Model

4 pillars: Demand Intake → Prioritization → Delivery → Governance. Jira as single source of truth. Pull-based execution with WIP limits, 2-level board design.

Level 1 — Epic Kanban (Portfolio)

Connects strategy to execution. Ideas evaluated by DTO Project Committee. Swimlanes by business area.

Backlog → PMO → Project Prep → Ready → Design & Build → Done

Swimlanes: Growth (Product) · Power Trading · O&M · Canceled

Forums: DTO Project Committee · Replenishment Meeting

Level 2 — Project Kanban (Execution)

Pull-based execution. WIP limits enforced. QA pulls from Dev immediately. Definition of Done required.

Backlog → In Progress → QA / Peer Review → UAT → Done

Swimlanes: Build 60% · BAU 25% · Upgrades 15%

Forums: Daily Flow Review · Retrospective / Kaizen

E2E Lifecycle Phases

Demand Intake	Prioritization	Delivery	Governance
Jira Ticket (standardized) · Class of Service · Triage · DoR	Continuous ordering · BV × Urgency × Capacity · Pre-Estimation	Pull from backlog · WIP limits · QA pulls from Dev · DoD	Flow Metrics: LT, CT, Throughput, Aging · Kaizen
Gate: Definition of Ready met	Gate: Prioritized Backlog	Gate: Definition of Done met	Gate: Metrics reviewed regularly

Link between Projects / Apps and Demands

Walk through the current state — and reflect on how the link is being built

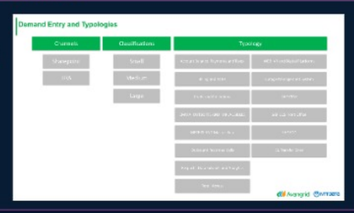

2026 Portfolio — Business & IT Funded Projects — The list of projects in flight for the year

SAP

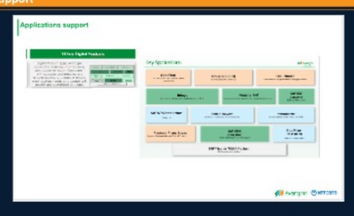

Demand Entry and Typologies — Channels · Classifications · Typologies

SAP

Applications Support — Digital Products × Key Applications

SAP

Is it already approved ?

REFLECTION SPACE

How is the link between Apps, Processes and Projects being built today?

Alignment on BRS Champion

Product Centric Operations for Digital Products

Vision on which role will work as the PO for SAP teams — since the demand areas own the E2E product

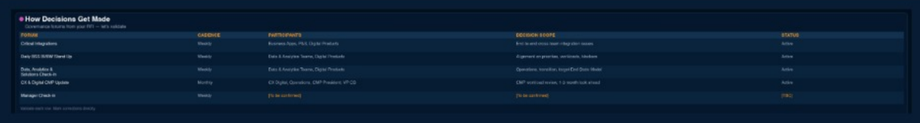

Stakeholder Interview Stephanie and Kumar

Stephanie — Stakeholder Interview

1-on-1 Discovery | 30 min

Walkthrough — Stephanie — 15 min

Your Role

SAP IT-CS Support Model

Weekly calls with Leadership

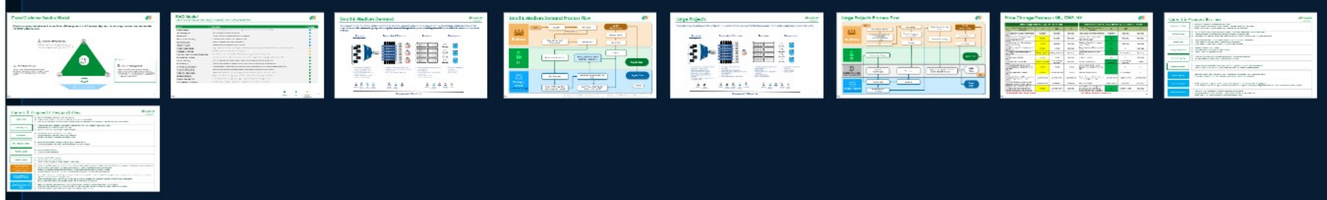

BRS - business

Who are the 3rd party ?

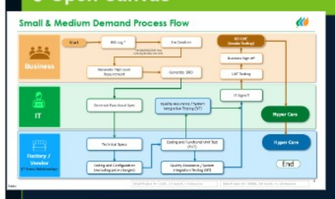

SAP Competency Centre scope - ORG CHART

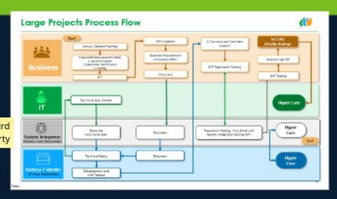

IT CS Operating model V1

Open Canvas — 15 min

Small and medium demand only for BRS or any other area/ team ?

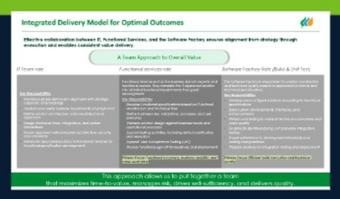

Third party

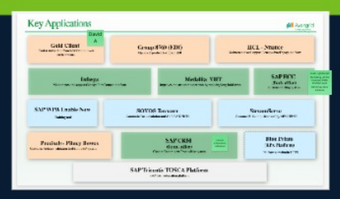

Who is the System Integrator? Third parties

Large projects for each areas / teams ?

How are we tracking the work that is in development by the Factory/Vendor

What is the difference between Fuctional versus Technical SAP Roles ?

Fixes and configurati... mainly do... by Vendo...

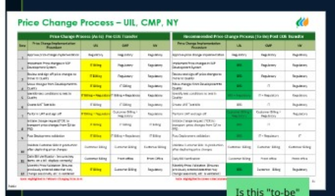

This is all demand from Customer Service.

Customer Service has a group of PMs for Large projects and then they come to SAP. Then doing BRP and prioritising work.

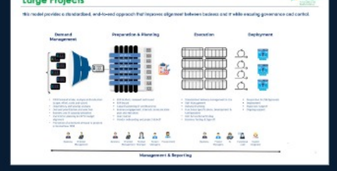

Internal PM under TRavis Structure.

How the projects are connected to applications and support teams ?

Is this "to-be" already in place ? Yes, already operating

Why for large projects we don't have the role of Produit Manager and SAP Architect in Demand Management ?

Product management shpuld also be in large projects.

JIRA for Small& Medium demands & PPM tools for large demand (projects)

Who is working as the Project Manager ? PMO group

Software Factory is probably managing the project itself

Jira (small-medium) and PPM (large)

Diffrence regarding Budget and timeline related

PMO Group (large projects - Travis) / BRS (business) /

How the projects are connected to applications and support teams ?

IT funded = Kumar teams

Pain Points & Aspirations

Where it hurts today and where IT CS wants to go

TOP PAIN POINTS

What are the top 3 frictions IT CS faces day-to-day?

Access to documentation - better organization (storage system) - single source of truth

Who is in charge of what (3 people can run the payment jobs for example)

Capacity management

Information (updates) on e-mails not in jira incident - Mix (BRS/Software Factory)

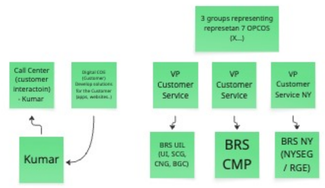

Issource allocation: Multiple OPCos (by capacity)

GAPS

Where are the biggest gaps between intent and reality?

WISH LIST

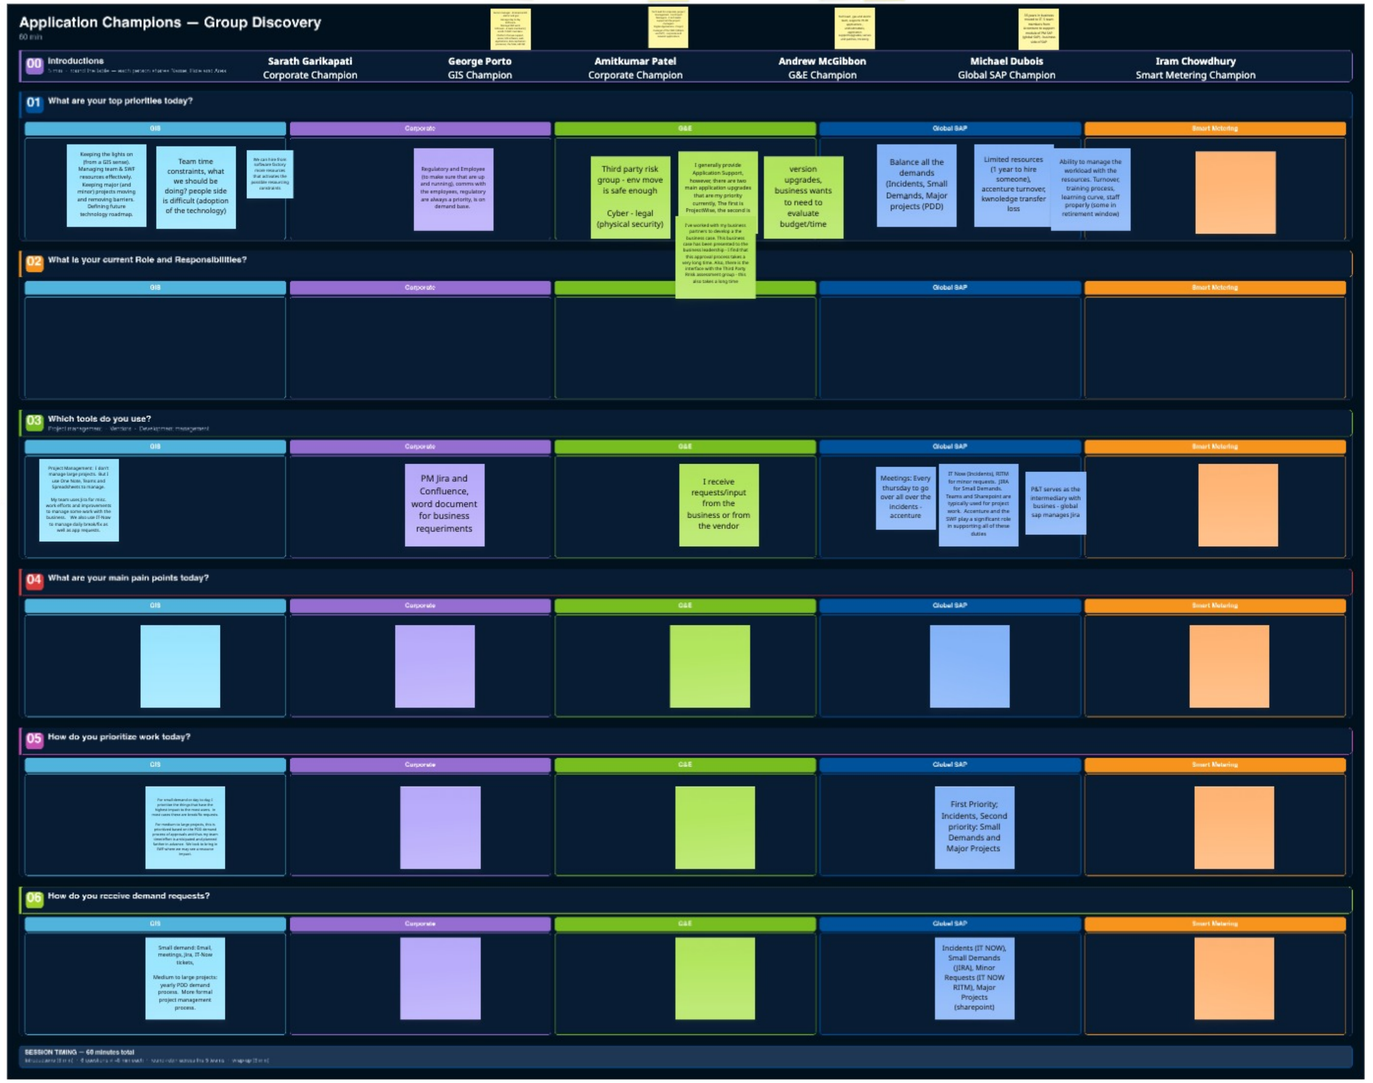

If you could change one thing about how demand reaches you?

Project execution is done by the vendor

Stakeholder Interview Application Champions

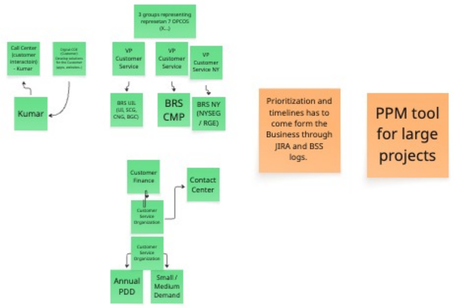

Take your post-its from here

SAP

Prioritization and timelines has to come form the Business through JIRA and BSS logs.

PPM tool for large projects

Demand x Portfolio Flow Canvas

AS-IS ◻ TO-BE | Areas 4–6 | End-to-end stages with guiding questions

01 INTAKE	02 CLASSIFICATION	03 PRIORITIZATION	04 PORTFOLIO	05 DELIVERY
Channels & Sources	Type, Size, Urgency	Scoring & Criteria	Governance & Decision	Execution & Flow
• What channels does work arrive through today? Who submits, how often, and what type of work? • Which channels are connected to existing governance meetings or routed directly to developers? • Are there sources you don't control (regulatory mandates, external demands)? • What tools/forms capture demand today? Is there an intake template? • What seasons or cyclical patterns spike demand (quarter-end, audits, budget cycles)? • What's the average time from request submission to first acknowledgment?	• How are requests classified today? (Type, priority, size, urgency) • What % of requests arrive with clear business value and acceptance criteria? • How often do 'urgent' requests bypass the normal process? • How many requests are duplicates or overlap existing work — and why does it happen?	• What criteria are used to prioritize? How do you balance business value, cost, and risk? • Who is responsible for prioritization decisions? • How are conflicts escalated or resolved when priorities clash? • How do dependencies impact prioritization and delivery timelines?	• What types of initiatives belong in the portfolio (Run / Grow / Transform)? • Is there a clear definition of what qualifies as a portfolio initiative? • Do you have a centralized, up-to-date view of all active initiatives? • What committees, forums, or decision-making bodies exist — and what's missing? • How are rejected or deprioritized requests communicated back to requestors? • How are initiatives funded and budgeted? Is funding fixed or flexible?	• How do you track progress across initiatives today? • Where are the handoffs or dependencies that slow delivery the most? • How are risks and issues identified, reported, and mitigated? • How is delivery quality measured and enforced?

AS-IS

Current state

One row per area / team. Describe how each topic works today per stage.

SAP

BRS

CMP / NY

BSS log - database CMP (if cant solve move it to Jira)

Jira (intake) - all - level 2

BRS - Business shares the priority

Low to critical (BSS log) criteria maybe added by Business

PDD to all of the groups

UIL

IThow (intake) day to day issues specific to UIL

Functional - work with the squads on requirements

Establish a process for demand/priorita ation Release cadence

Digital COE

Digital PMs (Functionals SAP from Kumar's team overseeing the work), 30% BRS and Internal IT, 70%

Digital PMs

Big Room Planning / Squads with visibility of what is coming

Heather first layer for prioritization

Data & Analytics (not a Demand directly) 2 main groups: Abdullah replace Kevin White TPO, Maxime, Nelly (4) A lot of demand. "I need it yesterday", regulatory, not requirements or functional specs). Bi weekly

Infraestructure

Major maintance, they reach to the department to "upgrade" on sunday. Weekly

Regulatory

Sometimes reaches directly to Managers, sometimes goes to PMs under Travis Urgency #1

Procurement

Procurement help, for major projects (pre-vetted vendors, pre-approved terms). Not for small things where we have some audience, all the time we have to involve them. Contract with vendors.

Cadence with procurement once a month - review license, new vendor

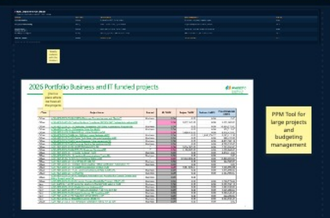

OT

Their own models, they don't use ORION, not support OT without governance. Some they put Jira Tickets. Demand Planning

Demand planning once a year small -medium demands

Simplest and cleanest way (same process) with specific secuence

No prioritization variables defined but forums to prioritize

PPM Tool for large projects and budgeting management

Which tools are used to manage Vendor work?

How are we planning to manage it from now on ?

Jira is working well -

TO-BE

Target state

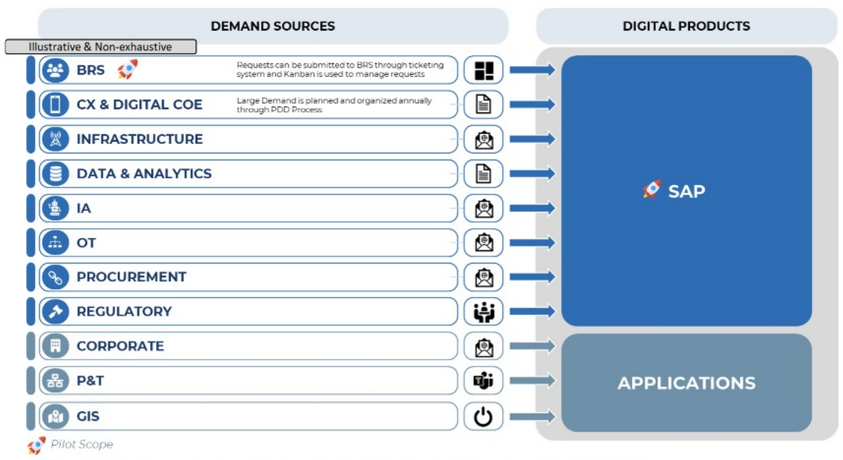

Build the shared target model here

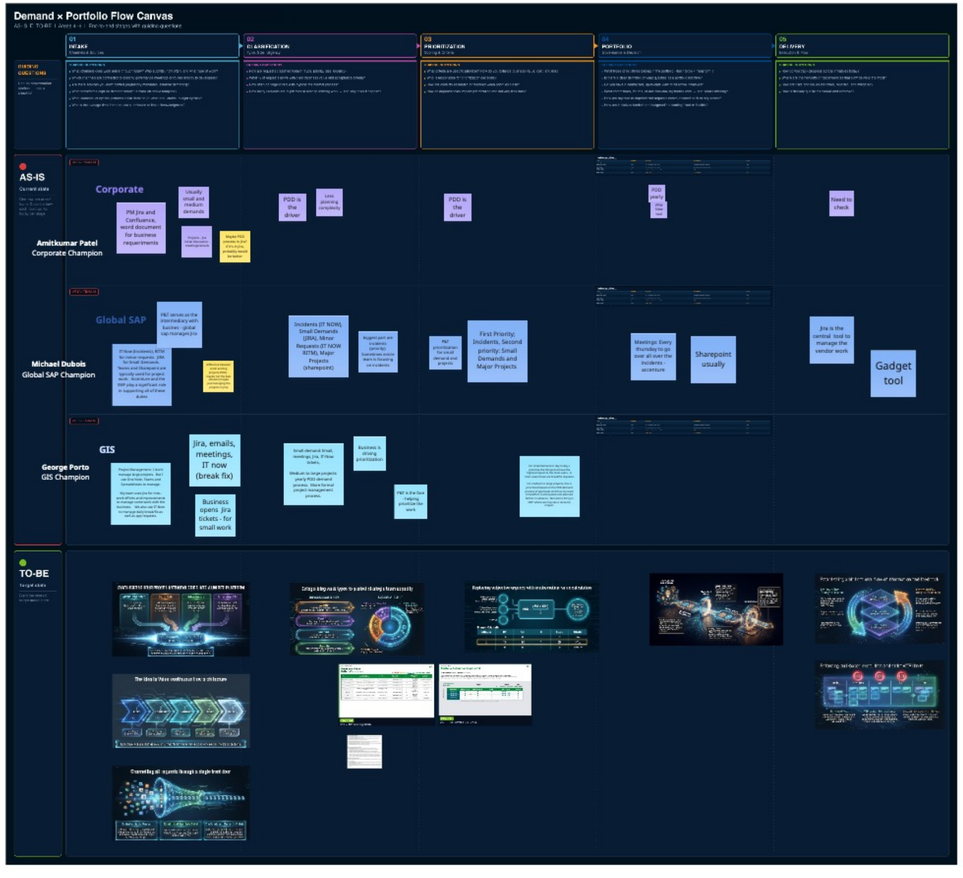

Any risk you see to have a single entry point ? Would Jira be a solution ?

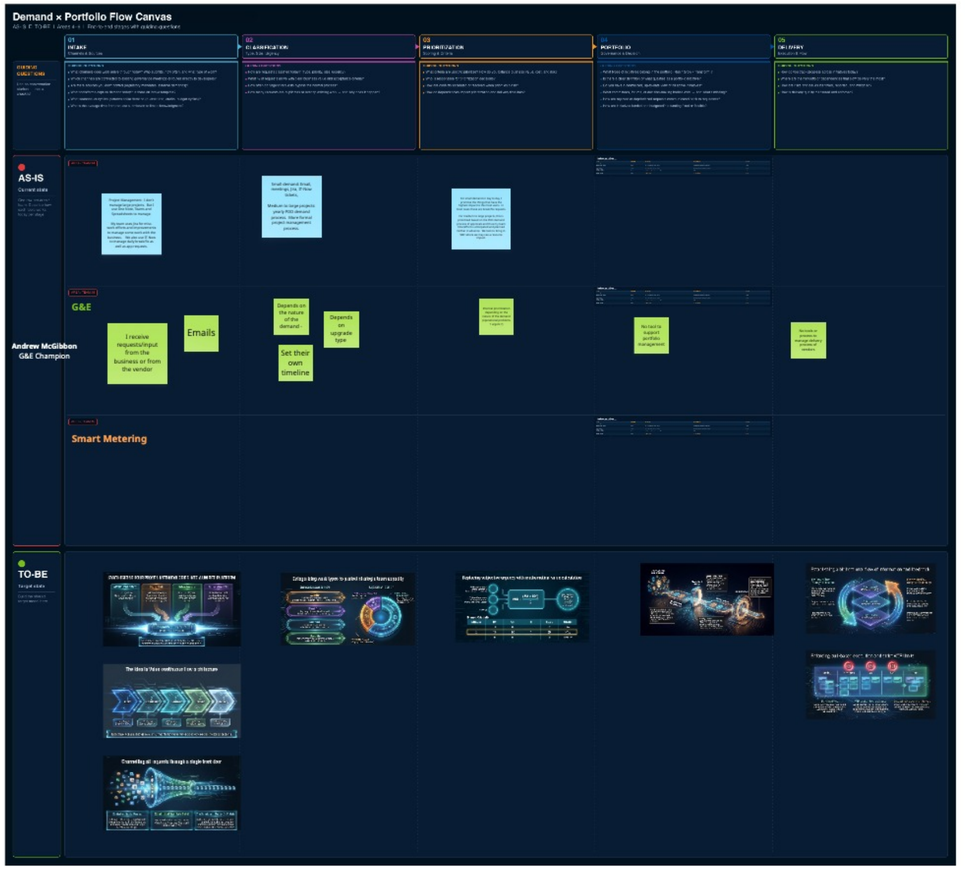

Change management (now they currently use many tools)

JIRA – Small Demands

IT Now Incidents

Requested Items - ITNow

Stakeholder Interview Carlos

Global SAP versus Local SAP

Business owned - they manage the vendor, support by vendor, pay (usually SaaS)

IT Owned - we always have a business owner + support by IT +
