AVANGRID · DIGITAL PRODUCTS

Target Operating Model

Wave 1 — Demand Management Design & Pilot

A product-centric operating model for IT Business Applications and Customer Services Applications under VP IT Business Solutions Delivery.

April 2026

Table of contents

NTT DATA

01 Context

Why Avangrid is consolidating Customer Services and IT Business Apps into Digital Products.

02 Executive Summary

The proposal in one page — scope, structural issues, governing principles, decisions ahead.

03 Current State Analysis

Vitor Cruz's three director branches, ~50 FTE, sub-team mapping and existing champions.

04 Structural Issues & Guiding Principles

Seven structural issues from the AS-IS, four guiding principles that resolve them.

05 Stage 1 · Demand Management

Five dimensions — Capabilities · Roles · Tools · Governance · Performance — visualized end to end.

06 Value Streams & Demand Flow

Eight Value Stream Crews, demand sources per crew, and the one-front-door TO-BE flow.

07 Portfolio Architecture & Roadmap

Three-layer portfolio view, Class of Service, Wave 1 in five steps over fourteen weeks.

08 Open Decisions & Next Steps

Pending decisions, gaps to validate, and the interview list for Wave 1 Step 1.

EXECUTIVE SUMMARY

NTT DATA

GOVERNING THOUGHT

Convert Avangrid's fragmented intake into a product-centric Target Operating Model — eight Value Stream Crews, one front door, one prioritization framework, two governance gates.

WHY NOW

- Demand fragmented across 6+ disconnected channels
- No shared definition of value across initiatives
- Portfolio visibility limited to Smart Metering (PPM Now)
- PJMs absorb demand reactively — no Product Manager role exists
- Forecast 30–50 % growth in Digital Products demand

WHAT WE PROPOSE

- 8 Value Stream Crews aligned to customer outcomes
- 1 Jira request type per VS · mandatory DoR fields
- 2-gate governance — weekly triage + monthly portfolio
- Class of Service framework — Expedite capped ≤ 20 %
- Two-level work model — Initiative at portfolio · Story at squad

HOW WE GET THERE

- Wave 1 — Demand Mgmt Design & Pilot (14 weeks)
- Pilot one Value Stream end to end · learn · adjust
- Wave 2 — scale validated playbook to remaining VSs
- Wave 3 — steady-state with quarterly Big Room Planning
- Continuous improvement through feedback loops

CURRENT STATE ANALYSIS

DIGITAL PRODUCTS SPANS TWO DIRECTOR BRANCHES PLUS PRODUCT MANAGEMENT

NTT DATA

Digital Products spans two director branches (~50 FTE) across nine sub-teams and a separate Product Management group.

Vitor Cruz — VP IT Business Solutions Delivery

Carlos Garbin — Director

IT Business Applications · ~26 FTE

Bruno Moreto — 7 FTE
Electric & Gas Ops
G&E Champion: Andrew McGibbon

George Porto — 6 FTE
GIS & OSG
GIS Champion: George Porto

Sarath Garikapati — 8 FTE
Corporate Applications
Corporate Champion: Amit Patel

Vanessa Colombo — 5 FTE
Global SAP · Iberdrola FI · PO · Budget
Global SAP Champion: Michael Dubois

Kumar Jaladanki — Director

Customer Services Apps · ~24 FTE

Ivelisse Velazquez — 8 FTE
FICA, Billing & Collection
SAP Champion: Stephanie

TBD (vacant) — 4 FTE
CRM & Contact Center Ops

Vincent Lam — 8 FTE
Billing, Device & Metering
Smart Metering Champion: Iram Chowdhury

Open (vacant) — 2 FTE
SAP & CS Architecture

Nagi Reddy — 2 FTE
SAP Basis

Heather LaJoie — Director

Product Management · ~2 FTE

Vacant — 2 FTE
Product Management

Strategic coordination layer across delivery and execution teams. Ensures alignment between business priorities and technical implementation.

Shapes and supports prioritization of work · provides direction throughout execution · enables consistent focus on value creation.

IT Program Delivery

(Vacant)

Vacant

Program Delivery role to be staffed

Area champion identified (6)

SEVEN STRUCTURAL ISSUES SURFACE — NO SINGLE-AREA FIX RESOLVES THEM; THE TOM MUST STANDARDIZE END-TO-END

NTT DATA

01 No Product Entry Point

Demand enters through multiple disconnected channels, with no single front door aligned to products or value streams.

(6+ disconnected channels — Jira · IT Now · RITM · SharePoint · Email · Word. No single front door.)

▶ Product model requires a unified intake layer structured around products, not tools or channels.

02 No Value-Based Decisioning

Prioritization is inconsistent and driven by local criteria, with no common definition of value across initiatives.

(Each area uses different criteria — PDD · impact × users · criticality · operational urgency · common sense.)

▶ Product model requires a standardized, value-based prioritization framework tied to business outcomes.

03 No End-to-End Product View

Portfolio management capabilities are fragmented, limiting visibility across demand, capacity, and delivery.

(No consistent and standardized use of portfolio tool. Only Smart Metering uses PPM Now.)

▶ Product model requires integrated portfolio tooling to manage products holistically across their lifecycle.

04 No Ownership of Outcomes

No standard process to manage delivery. Ownership is unclear across the lifecycle, with teams and vendors defining timelines and follow-up independently.
(Each team estimates, sets timelines, and follows up on delivery on its own.)

▶ Product model requires clear ownership, performance management, and outcome-based governance.

05 No Product-Level Steering

Existing forums are not structured to drive portfolio-level or product-based decisions.

(Different recurring forums exist — but no forum covers portfolio-level decisions.)

▶ Product model requires governance aligned to product portfolios, with clear accountability and decision rights.

06 No Common Language of Value

Lack of standardized definitions of impact (client, business value) prevents consistent evaluation and comparison of work.

(Each demand request is worked depending on perception of value and demand size.)

▶ Product model requires a shared taxonomy and classification model as a foundation for prioritization and planning.

07 No Product Ownership Model

Work is organized around projects and applications, with limited alignment to value streams or business outcomes.

(Demand is organized by application silo, not by value stream. IT requests don't trace to business OKRs.)

▶ Product model requires organizing around products, with clear ownership and alignment to business OKRs.

FOUR GUIDING PRINCIPLES

EACH PRINCIPLE ANSWERS SPECIFIC STRUCTURAL ISSUES FROM THE AS-IS

NTT DATA

01

DEMAND INTAKE & STRUCTURING

Resolves Issue 01 — No Product Entry Point

- All demand captured through unified intake layer aligned to products / value streams
- Single entry point per product / value stream
- Standard intake criteria and mandatory fields
- Consistent demand categorization (type, size, complexity, value driver)
- Clear ownership for triage and backlog assignment

02

VALUE-BASED PRIORITIZATION

Resolves Issues 02 + 06 — No Value-Based Decisioning · No Common Language of Value

- Demand evaluated using a standardized framework tied to business outcomes
- Common scoring model: value · urgency · risk · effort
- Transparent prioritization across competing demands
- Product-level backlog ownership
- Trade-offs made at portfolio / product governance level

03

PRODUCT PORTFOLIO MGMT & PLANNING

Resolves Issue 03 — No End-to-End Product View

- End-to-end visibility enables coordinated planning across demand · capacity · delivery
- Integrated portfolio view across all products
- Capacity planning aligned to product priorities
- Roadmaps managed at product level (not project level)
- Continuous tracking of delivery and outcomes

04

PRODUCT GOVERNANCE & OWNERSHIP

Resolves Issues 04 + 05 + 07 — Ownership · Steering · Product Model

- Clear accountability and governance align decisions to product outcomes
- Defined roles — Product Owner / Product Manager / Tech Lead
- Product-based governance forums with decision rights
- Vendor management aligned to product performance
- KPIs tied to product outcomes and business value

DEMAND MANAGEMENT

FIVE CORE PRACTICES THAT RESHAPE THE INTAKE CONVERSATION

NTT DATA

SINGLE FRONT DOOR FOR DEMAND

All demand types in one place

- Incidents
- Enhancements
- Regulatory items
- Innovation initiatives
- Technical debt

DEMAND SHAPING

Structured problem-impact-value conversations

- Don't accept 'solutions' directly
- Work with requesters to surface the underlying problem
- Quantify impact before discussing solution
- Apply value lens before scoping work

CLASSIFICATION BY PRODUCT TYPE

Two complementary axes

- Run · Grow · Transform (investment intent)
- Core SAP vs Extensions / satellites (architecture impact)
- Both axes captured at intake form
- Drives capacity allocation and routing

LIGHTWEIGHT BUT FORMAL DISCOVERY

Required artifacts before scoring

- Problem statement (one paragraph)
- Users / personas affected
- Hypothesis of value
- Hypothesis of risk

VALUE & PRIORITIZATION FRAMEWORK

Multi-factor score, not single judgment

- Business value (revenue · cost · strategic fit)
- Risk (operational · regulatory · technical)
- Regulatory urgency (deadline-driven items)
- Cost of Delay (value lost per period of delay)

TARGET OPERATING MODEL

EIGHT VALUE STREAM TEAMS ALIGNED TO CUSTOMER OUTCOMES

NTT DATA

Meter-to-Cash · Service Lifecycle

Customer signs up · activates · changes · disconnects

EXAMPLE APPLICATIONS

SAP Metering · MV90

Meter-to-Cash · Revenue Operations

Accurate billing · easy payment · fair recovery

EXAMPLE APPLICATIONS

SAP FICA · ECC · StreamServe

Customer Care & Contact Center

Issue resolution · self-service · voice of customer

EXAMPLE APPLICATIONS

SAP CRM · Medallia · Blue Prism

Field Operations

Field worker / inspector / lineman productivity

EXAMPLE APPLICATIONS

Lemur-SF · FWM · ARCOS · Field Force

Engineering & Asset Management

Engineer / planner designs with reliable data

EXAMPLE APPLICATIONS

ArcFM · ProjectWise · Bentley · CYME

Network Operations & Control

Grid operator prevents and minimizes outages

EXAMPLE APPLICATIONS

Echelon · Cimplicity · SLAM · Switching Orders

Corporate & Regulatory

HR / employee / regulatory user self-service

EXAMPLE APPLICATIONS

OpenText · Rate Case Advisor · Utilisphere

Iberdrola Corporate Services

Spain finance / procurement / budget

EXAMPLE APPLICATIONS

SAP FI · PO · Budget · S/4HANA

Customer Services Applications

IT Business Applications

STAGE 01 — DEMAND MANAGEMENT

FIVE FRAMEWORK DIMENSIONS

NTT DATA

CAPABILITIES

14 items

What the organization must be able to do

Intake · classification · scoring · triage · routing · visibility · de-duplication

ROLES

4 items

Who owns and operates the framework

Requestors · Product/Demand Managers · Architects · Triage Committee

TOOLS

5 items

Systems and platforms used

Capture · tracking · communication · documentation · reporting

GOVERNANCE

6 items

Decisions, forums, controls

Forums · decision practices · escalation · guidelines · alignment · oversight

PERFORMANCE

7 items

How success is measured

Volume · quality · lead time · channel mix · urgency · duplication · visibility

CAPABILITIES

14 CAPABILITIES ORGANIZE INTO A FOUR-STAGE DEMAND FUNNEL

NTT DATA

STAGE 01 · CAPABILITIES

What the organization must be able to do — end to end.

Resolves Issues 01 + 02 + 06

INTAKE

- Demand intake channels (Jira request type)
- Standard intake formats (DoR)
- Channel consolidation
- Technical feasibility input

CLASSIFY

- Demand classification
- Run · Change · Regulatory · Innovation
- Business value definition (Pain Score)
- Acceptance criteria

DECIDE

- Triage & validation (weekly)
- Demand routing & assignment
- Urgent / exception requests (≤20%)

VISUALIZE

- Demand registration & logging
- Demand visibility & tracking
- Duplicate & overlap identification

ONE FRONT DOOR

Jira request type per Value Stream replaces Email · Teams · Word · OneNote ad-hoc requests.

DEFINITION OF READY

Mandatory fields: title · BV · acceptance criteria · CoS · sponsor.

PAIN SCORE

$H(x) = (BV \cdot w_1 + UX \cdot w_2 + Safety \cdot w_3) / Effort$ — sponsor signs off at intake.

EXPEDITE CAP

Bypass priority capped ≤ 20 % of throughput. No silent overrides.

TAKEAWAY

The 14 capabilities are not a checklist — they are sequenced. Demand only moves stage-to-stage after passing the previous gate, which is what converts inflow into traceable, governed work.

ROLES

FOUR ACCOUNTABILITIES OWN THE DEMAND FLOW END TO END

NTT DATA

STAGE 01 · ROLES — *Who owns and operates the framework.* — Resolves Issues 04 + 07

BUSINESS REQUESTOR

Originating business unit

- Submits demand via Jira request type (one per VS)
- Sponsors the request and signs off business value
- Receives status updates through requester portal

Decides WHAT business outcome is needed

PRODUCT MANAGER [NEW]

One per Value Stream Team

- Owns backlog priority for the Value Stream
- Owns Pain Score and outcome KPIs
- Chairs the Portfolio review for the VS

Decides WHEN and IN WHAT ORDER work is done

ARCHITECT REVIEWER

Architecture Council (rotating)

- Provides feasibility view at intake gate (≤2 h)
- Verdict: Feasible · Conditional · Not feasible
- Advisory — does not veto

Decides HOW it should be built

TRIAGE / DEMAND MGR

Cross-VS chair

- Chairs weekly Gate 1 triage (30 min)
- Audits scoring and intake quality
- Escalates cross-VS conflicts to Gate 2

Decides IF the demand is ready to enter the funnel

WHY THE PRODUCT MANAGER ROLE IS NEW

Today Avangrid has Project Managers (PJMs), Sr. Managers and Champions — not Product Managers. The PM role owns outcomes (not just delivery) and is the single accountable name for each Value Stream's portfolio. This role is created from scratch as part of the TOM.

TOOLS

FIVE LAYERS CONSOLIDATE TODAY'S FRAGMENTED TOOLSET INTO ONE STACK

NTT DATA

STAGE 01 · TOOLS

The systems and platforms used end to end.

Resolves Issue 03

01 CAPTURE	One Jira request type per Value Stream
02 TRACK	Jira backlog · Initiative → Epic → Story · Team Kanban
03 COMMUNICATE	Requester portal · auto-status · forum routing
04 DOCUMENT	Confluence (DoR · CoS · per-VS product brief)
05 REPORT	Demand dashboard · 5 views · refresh < 1 h

BEFORE · fragmented

- 6+ disconnected channels (Jira · IT Now · RITM · SharePoint · Email · Word)
- No standard intake form
- No common backlog · per-team spreadsheets
- Status communicated by ad-hoc replies
- Reporting manual, monthly, after the fact

AFTER · one stack

- One Jira request type per Value Stream
- Mandatory DoR fields enforced at submit
- Single backlog system of record
- Live requester portal · auto-status
- Demand dashboard refreshed under 1 hour

GOVERNANCE

TWO GATES ABSORB THE DEMAND · ONE CADENCE DRIVES THE PORTFOLIO

NTT DATA

STAGE 01 · GOVERNANCE

Decisions, forums, and controls that keep the funnel honest.

Resolves Issues 04 + 05

GATE 1 · TRIAGE

Weekly · 30 min

Demand Manager (chair) · PMs · Architect

Accept | Send-back | Reject | Redirect

Filters and routes demand. Verdict logged with reason. SLA: 5 business days.

GATE 2 · PORTFOLIO

Monthly · 90 min

VP · Directors · Product Managers

Prioritize | Defer | Cancel | Re-scope

Trade-offs across Value Streams. Capacity vs CoS commitments. Owns the roadmap.

BIG ROOM PLANNING

Quarterly · ½ day

All VSs + business sponsors + Iberdrola

Confirm WHY | Align HOW | Spot DEPS | Lock OKRs

Cross-portfolio alignment. Surfaces dependencies early and locks quarterly OKRs.

ESCALATION LANE

Cross-VS conflicts → Customer Journey Forum · Cross-portfolio conflicts → VP Portfolio Sync · Every Expedite reviewed at the next Gate 2

TAKEAWAY

Two cadences are sufficient — weekly clears noise, monthly steers value, quarterly aligns the portfolio. Replaces today's mix of ad-hoc forums where 'regulatory always wins' bypassed the queue.

PERFORMANCE

SEVEN KPIS MAKE DEMAND HEALTH OBSERVABLE IN ONE DASHBOARD

NTT DATA

STAGE 01 · PERFORMANCE — *How success is measured across the demand funnel.* — Resolves Issues 02 + 06

DEMAND VOLUME

Submissions / week

trend visible

by VS · CoS · OPCO

DoR PASS RATE

% accepted at first submit

≥ 70 %

Target ≥ 70 %

TRIAGE LEAD TIME

Submit → Gate 1 verdict

≤ 5 d (P50)

Target ≤ 5 business days

CHANNEL ADOPTION

% via single front door

≥ 90 %

Target 90 % by month 6

EXPEDITE SHARE

% of throughput

≤ 20 %

Cap 20 %

DUPLICATION RATE

% submissions matched

↓

Trend: down

STATUS VISIBILITY

% with live status

100 %

Target 100 %

TAKEAWAY

These seven KPIs are the contract — if any one drifts, the demand funnel is leaking. Live dashboard means leakage is visible the next day, not the next quarter.

CAPABILITIES

WHAT THE ORGANIZATION MUST BE ABLE TO DO

NTT DATA

CAPABILITIES · 14 items

Demand intake channels

One Jira request type per Value Stream · size captured as a field (S · M · L · XL). IT Now reserved for incidents only. Email · Teams · Word · OneNote decommissioned.

Demand registration & logging

Auto-created backlog item from intake form. Immutable audit fields: requester, business unit, team, date. Every state change logged.

Channel consolidation

One adaptive intake form per team. Target: 90% of demand via single channel by month 6. No alternative formal channels accepted.

Standard intake formats

Canonical template with mandatory Definition of Ready fields: title, business value, acceptance criteria, class of service, due date, sponsor.

Demand classification

Three independent axes: type, size, urgency. Closed taxonomy. Classification done at intake gate, not self-declared.

Run · Change · Regulatory · Innovation

Four Classes of Service with capacity caps. Replaces ad-hoc 'urgent override' culture with explicit policy.

Business value definition

Weighted scoring formula combining business value, user experience, safety, and effort. Sponsor signs off the score at intake.

Acceptance criteria

Mandatory in Definition of Ready. Format: Given/When/Then or measurable outcome. Reviewed before scoring. Immutable post-prioritization.

Technical feasibility input

Lightweight check at intake gate by rotating architect. Time-boxed (2 hours max). Output: Feasible / Conditional / Not feasible.

Triage & validation

Weekly 30-minute triage committee. Outcomes: Accept · Send-back · Reject. Five-business-day SLA.

Demand routing & assignment

Routing by Value Stream, not by team or person. Auto-routing based on requester selection. Cross-stream items go to Architecture review.

Urgent or exception requests

Expedite Class of Service capped at 20% of throughput. Real-time incidents bypass intake (Service Desk SLA).

Demand visibility & tracking

Single dashboard, public read-only. Views: inflow funnel · backlog by team · class-of-service mix · aging · top priorities.

Duplicate & overlap identification

Similarity search at submit (top-3 matches surfaced). Weekly de-dup query. Overlaps escalated to Portfolio Committee.

ROLES

WHO OWNS AND OPERATES THE FRAMEWORK

NTT DATA

ROLES · 4 items

Business requestors & stakeholders

All originating business units route through a single intake form per Value Stream. Includes Customer Service Products organization, Networks Business sponsors, Iberdrola corporate, and BRS UIL/CMP/NY operating companies.

Product or Demand Managers

One Product Manager per Value Stream Team — accountable for outcome, scoring, and backlog priority. One Demand Manager (cross-team) audits scoring and intake quality.

Architects & technical reviewers

Architecture Council with rotating members from existing technical leads. Time-boxed advisory input at the intake gate. Provides feasibility view, not a veto.

Triage / intake committee

Weekly committee per portfolio. Composition: Demand Manager (chair) plus Product Managers and Architect. Decisions logged with reason. Cross-portfolio escalations go to monthly Portfolio Committee.

TOOLS

SYSTEMS AND PLATFORMS USED

NTT DATA

TOOLS · 5 items

Demand capture

One Jira request type per Value Stream Team — size captured as a field. Mandatory fields enforce Definition of Ready. IT Now reserved for incidents only.

Tracking & backlog

Single backlog system as system of record. Item hierarchy: Initiative → Epic → Story. Team Kanban with five phases and dual track (Discovery + Delivery).

Communication channels

Triage outcomes auto-published to requesters. Per-requester portal showing live status. Cross-team coordination through dedicated forums.

Documentation

Single source of truth for Definition of Ready, Class of Service taxonomy, per-team product brief. Sponsor approval logged within the intake form itself.

Reporting & visibility

Demand dashboard with five views: inflow funnel, backlog by team, class-of-service mix, aging, top priorities. Auto-refresh under one hour. Director-level rollups.

GOVERNANCE

DECISIONS, FORUMS, AND CONTROLS

NTT DATA

GOVERNANCE · 6 items

Demand review forums

Two-gate structure. Gate 1: weekly triage (30 minutes). Gate 2: monthly Portfolio Committee (90 minutes). Quarterly cross-portfolio Big Room Planning.

Decision-making practices

Four explicit outcomes: Accept · Send-back · Reject · Redirect. Every decision audit-logged with reason. No silent overrides.

Escalation mechanisms

Cross-team conflicts resolved at Customer Journey Forum. Cross-portfolio conflicts resolved at VP Portfolio Sync. Every Expedite reviewed at the next Portfolio Committee.

Definition of intake guidelines

Single source of truth for the Definition of Ready template, Class of Service taxonomy, and capacity caps. Reviewed every six months by the Demand Council.

Alignment with business stakeholders

Quarterly Big Room Planning. Customer Journey Forum per major customer journey. Sponsor sign-off mandatory at intake (business value approval).

Oversight of inflow & backlog health

Demand Manager owns the demand dashboard. Aging beyond threshold triggers automatic escalation. Quarterly demand-vs-delivery conversion review.

PERFORMANCE

HOW SUCCESS IS MEASURED

NTT DATA

PERFORMANCE · 7 items

Demand volume & inflow trends

Submissions per week, month, quarter. Breakdown by Value Stream, Class of Service, OPCO, and source business area.

Demand quality

Definition-of-Ready pass-rate at first submission (target 70% or higher). Re-submission rate per requester. Acceptance criteria quality score.

Triage lead time

Median time from submission to Gate 1 decision (target 5 business days or less). 90th percentile to surface outliers. Breakdown per Class of Service.

% via formal channels

Target 90% via single channel by month 6. Decommissioned-channel residuals tracked monthly. Per-business-unit adoption visible.

% urgent or bypassed

Expedite as percent of total throughput (cap 20%). Regulatory subset tracked. Auto-downgrade rate of unauthorized 'urgent' claims.

Duplication & overlap

Duplicate-link rate (% submissions matched to existing). Overlap escalations resolved at Portfolio Committee.

Visibility & traceability

Percent of requesters who can find own submission status (target 100%). Average time to status update. Live per-business-unit portal.

ROLES & RESPONSIBILITIES

CURRENT PEOPLE AND PROPOSED ROLES

NTT DATA

EXISTING LEADERSHIP

Vitor Cruz	Carlos Garbin	Kumar Jaladanki	Heather LaJoie	Travis · PMO Lead

VALUE STREAM = SQUAD

TWO-LEVEL WORK MODEL WITH EPIC AS EXCEPTION

NTT DATA

VALUE STREAM = SQUAD

Each Value Stream Crew is a permanent, multi-functional Squad — single-product ownership, stable composition, ≈3–5 Avangrid FTE (Product Manager · Tech Lead · BA · SMEs) plus a vendor extension that does the actual delivery. Eight Value Streams = eight Squads. The Squad owns its product backlog and operates one Team Kanban.

DEFAULT FLOW · Initiative → Story

INITIATIVE

Outcome at portfolio level · sized for ≤ 3 months · sponsor-approved · lives on the Portfolio Board

▼

STORY #1	STORY #2	STORY #3	STORY #4

Stories live on the Team Kanban (the Squad's board) — pulled by capacity, small enough to finish in days/weeks.

EXCEPTION · Initiative > 3 months → use Epics

INITIATIVE (large · multi-quarter)

▼

EPIC #1	EPIC #2	EPIC #3

▼

S	S	S	S	S	S

Epics slice an oversized Initiative into deliverable chunks. Stories under each Epic continue to live on the Team Kanban.

STAGE 1 SPECIFICS

HOW THE FRAMEWORK LANDS DIFFERENTLY IN CS APPS VS IT BUSINESS APPS

NTT DATA

	CUSTOMER SERVICES APPS · Kumar Jaladanki · 3 Value Streams	IT BUSINESS APPS · Carlos Garbin · 5 Value Streams
INTAKE / DEMAND SOURCES	Customer Operations · OPCO call centers · Marketing · Customer Service GenAI · Heather LaJoie's Product Management.	G&E Operations · Engineering · Storm Ops · System Operations control room · Iberdrola corporate · regulatory affairs.
APPLICATIONS	SAP CRM · IS-U FICA · Smart Metering / Itron · Medallia · IVR · Contact Center.	GIS (ArcGIS · Smallworld) · OMS · SCADA · EMS · Maintenance (16 apps) · Global SAP.
VENDOR EXTENSION	Lemur-Salesforce (CRM) · Itron / Smart Metering · Accenture (FICA) · IVR partner · Medallia partner.	HCL (GIS) · Esri partners · GE / Siemens / ABB (SCADA / EMS / OMS) · SWF · Infosys · Iberdrola IT.

RUN / GROW / TRANSFORM MIX [estimate]	Run ~50 % · Grow ~35 % · Transform ~15 % — customer-experience and digital channel weight Grow.	Run ~60 % · Grow ~25 % · Transform ~15 % — operational reliability and asset health weight Run.

STAGE 1 INTAKE DETAIL

CUSTOMER SERVICES APPS

NTT DATA

CUSTOMER SERVICES APPS · Kumar Jaladanki · 3 Value Streams — M2C-SL · M2C-RO · CCC

DEMAND SOURCES — who sends the work

- Customer Operations (Heather LaJoie · Product Management)
- OPCO call centers (UIL · CMP · NY) — escalations and trends
- Marketing & Communications — campaign and digital channel demand
- Customer Service GenAI initiative — pipeline of new use cases
- Smart Metering program — CT · ME · NY rollout drivers
- Regulatory affairs — rate cases · tariff changes · tax updates

CHANNELS BY TYPE — how it arrives

- ONE Jira request type per Value Stream (M2C-SL · M2C-RO · CCC)
- Mandatory fields: VS · type · size · CoS · OPCO · sponsor · Pain Score
- IT Now — restricted to CCC / Smart Metering INCIDENTS only
- Email · Teams · Word — DECOMMISSIONED for new demand
- Heather LaJoie's Product Management — feeds CCC backlog directly
- [GAP] confirm whether Marketing demand routes via M2C-RO or CCC

CLASSIFICATION — branch-specific rules

- Run / Grow / Transform — labeled at intake (default ~50 / 35 / 15 %)
- Class of Service — Standard · Expedite (customer-impact) · Fixed-date · Intangible
- Customer impact tier P1–P4 — customer-facing severity drives Expedite
- CSAT-sensitive items flagged separately (Medallia signal)
- Regulatory tariff items always Fixed-date with rate-case calendar lock
- Smart Metering CT / ME mandates — pre-classified as Fixed-date

PRIORITIZATION — Pain Score weighting

- Pain Score $H(x) = (BV \cdot w_1 + UX \cdot w_2 + Safety \cdot w_3) / Effort$
- CS weighting — UX heavy: $w_1=0.35$ · $w_2=0.40$ · $w_3=0.25$ [proposal]
- Sponsor sign-off mandatory at intake (Heather / Marketing / Ops)
- Backlog ranked monthly at Gate 2 by the VS Product Manager
- Cross-VS conflicts (e.g. CRM ↔ Smart Metering) resolved at Customer Journey Forum
- Capacity reserved 10–15 % per quarter for Intangible (tech debt)

STAGE 1 INTAKE DETAIL

IT BUSINESS APPS

NTT DATA

IT BUSINESS APPS · Carlos Garbin · 5 Value Streams — Field Ops · E&A · NOC · C&R · IBD

DEMAND SOURCES — who sends the work

- Gas & Electric Operations (Bruno Moreto · Andrew McGibbon Champion)
- Engineering · Asset planners · capital project sponsors
- Storm Operations & Emergency Management
- System Operations control room (24/7) — control engineers
- Iberdrola corporate (Bilbao) — Vanessa Colombo intake
- Corporate functions — Finance · HR · Procurement · Legal · Regulatory
- Sarath Garikapati's PJM pool — today distributed, will centralize

CHANNELS BY TYPE — how it arrives

- ONE Jira request type per Value Stream (Field Ops · E&A · NOC · C&R · IBD)
- Mandatory fields: VS · type · size · CoS · OPCO · sponsor · Pain Score
- IT Now — restricted to OT / SCADA / OMS INCIDENTS only
- PPM Now (Smart Metering) → migrated into VS-level Jira backlog
- Email · SharePoint · Word — DECOMMISSIONED for new demand
- Iberdrola Global SAP release calendar — cross-routed via IBD VS

CLASSIFICATION — branch-specific rules

- Run / Grow / Transform — labeled at intake (default ~60 / 25 / 15 %)
- Class of Service — Standard · Fixed-date (regulatory · storm) · Expedite · Intangible
- Safety-sensitive items (NOC · Field Ops) auto-routed Expedite
- Storm response triggers Fixed-date with reliability deadline lock
- Capital plan items synced with Avangrid annual capital cycle (rate base)
- Regulatory submissions (NY PSC · CT PURA · ME PUC) pre-tagged Fixed-date

PRIORITIZATION — Pain Score weighting

- Pain Score $H(x) = (BV \cdot w_1 + UX \cdot w_2 + Safety \cdot w_3) / Effort$
- IT weighting — Safety heavy: $w_1=0.40$ · $w_2=0.20$ · $w_3=0.40$ [proposal]
- Sponsor sign-off mandatory at intake (G&E · Engineering · Iberdrola)
- Backlog ranked monthly at Gate 2 by the VS Product Manager
- Cross-VS conflicts (e.g. NOC ↔ Field Ops storm) resolved at VP Portfolio Sync
- Reliability-impacting items override capacity caps (logged exception)

VALUE STREAM

M2C-SL METER-TO-CASH · SERVICE LIFECYCLE — SMART-METER TO INVOICE WITH ZERO DATA LOSS

NTT DATA

CS Apps · Kumar Jaladanki · Vincent Lam (sub-team lead)

Run · Grow · Transform mix · Run 60% · Grow 30% · Transform 10% [estimate]

OUTCOME

Capture every meter read accurately · feed billing on time · resolve device-to-data exceptions before they reach the customer.

APPLICATIONS SUPPORTED

- Itron OpenWay (AMI head-end)
- Meter Data Management (MDM)
- SAP IS-U Device Management
- Smart Metering platform
- Field meter read interfaces

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- Smart Metering program (CT · ME · NY rollout)
- Field Operations exceptions and escalations
- Regulatory drivers (CT PURA · ME PUC · NY PSC mandates)
- AMI vendor release schedule

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead — Vincent Lam / Iram Chowdhury (Champion)
- Business Analyst
- SMEs from Smart Metering program

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- Smart Metering vendor (stable team — Option A model)
- Itron managed services
- SAP partner for IS-U Device

Avangrid = product owner · vendor = delivery muscle

VALUE STREAM

M2C-RO METER-TO-CASH · REVENUE OPERATIONS — BILL ONCE, BILL RIGHT, COLLECT ON TIME

NTT DATA

CS Apps · Kumar Jaladanki · Ivelisse Velazquez (sub-team lead)

Run · Grow · Transform mix · Run 50% · Grow 35% · Transform 15% [estimate]

OUTCOME

Standardize billing, FICA and collection processes across OPCOs · respond to rate cases without ad-hoc workarounds.

APPLICATIONS SUPPORTED

- SAP IS-U FICA
- SAP CRM Billing
- Collection systems
- Rate-case calculation tooling
- Tax engine integrations

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- Finance & Billing Operations (UIL · CMP · NY)
- Regulatory (rate-case filings, tariff changes)
- Tax updates and federal/state mandates
- Customer escalations from CCC

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead
- Business Analyst — billing & FICA SME
- Stephanie (SAP Champion · cross-link)

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- Accenture (FICA / IS-U delivery)
- SAP partners
- [GAP] confirm primary FICA vendor with Vitor

Avangrid = product owner · vendor = delivery muscle

VALUE STREAM

CCC CUSTOMER CARE & CONTACT CENTER — RESOLVE CUSTOMER INTERACTIONS ON FIRST CONTACT

NTT DATA

CS Apps · Kumar Jaladanki · CRM/CCC sub-team (vacancy)

Run · Grow · Transform mix · Run 45% · Grow 35% · Transform 20% [estimate]

OUTCOME

Unify CRM, Contact Center and digital self-service so every customer interaction lands in a single record with a clear next step.

APPLICATIONS SUPPORTED

- SAP CRM
- Contact Center platform (CCC)
- Medallia (CSAT and journey signal)
- IVR Solution
- Digital self-service / chatbot

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- Customer Operations (Heather LaJoie's Product Mgmt)
- Marketing & Communications (campaign demand)
- OPCO call centers (UIL · CMP · NY)
- Customer Service GenAI initiative pipeline

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead — vacancy (CRM & Contact Center Ops)
- Business Analyst — CX SME
- [GAP] confirm CCC sub-team lead post-vacancy

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- Lemur-Salesforce (CRM delivery)
- IVR vendor
- Medallia partner
- Digital channel agency

Avangrid = product owner · vendor = delivery muscle

VALUE STREAM

NTT DATA

FO FIELD OPERATIONS — FIELD CREWS DISPATCHED, TRACKED, AND CLOSED IN ONE WORKFLOW

IT Apps · Carlos Garbin · George Porto (sub-team lead)

Run · Grow · Transform mix · Run 65% · Grow 25% · Transform 10% [estimate]

OUTCOME

GIS, workforce, outage and storm response capabilities operate as one integrated field operations stack.

APPLICATIONS SUPPORTED

- ESRI ArcGIS (network model)
- Smallworld GIS
- OSG — Outage / Storm Management
- Mobile workforce apps
- Crew dispatch tooling

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- G&E Operations (Bruno Moreto's team)
- Field workforce and dispatch supervisors
- Storm response & emergency management
- Iberdrola G&E global program

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead — George Porto (GIS Champion)
- Business Analyst
- Field SMEs (rotating)

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- HCL (GIS support and maintenance)
- Esri partners
- OSG vendor

Avangrid = product owner · vendor = delivery muscle

VALUE STREAM

NTT DATA

EAM ENGINEERING & ASSET MANAGEMENT — ASSET DATA TRUSTED ENOUGH TO DRIVE CAPITAL AND MAINTENANCE DECISIONS

IT Apps · Carlos Garbin · cross sub-teams

Run · Grow · Transform mix · Run 55% · Grow 30% · Transform 15% [estimate]

OUTCOME

Reliable engineering and maintenance data feeds the rate base, capital plan, and reliability commitments.

APPLICATIONS SUPPORTED

- Maintenance management apps (16 apps · largest cluster)
- Asset Management systems
- Engineering design tools
- Reliability analytics

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- G&E Engineering
- Asset planners and capital project sponsors
- Maintenance and reliability engineers
- Capital plan governance

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead
- Business Analyst
- Engineering & Maintenance SMEs

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- SWF (delivery partner)
- OEMs (asset-specific)
- [GAP] consolidate vendor map for the 16-app maintenance cluster

Avangrid = product owner · vendor = delivery muscle

VALUE STREAM

NTT DATA

NOC NETWORK OPERATIONS & CONTROL [NEW STREAM] — REAL-TIME GRID VISIBILITY AND CONTROL WITH NO BLIND SPOTS

IT Apps · Carlos Garbin · surfaced from IT Networks Application Assessment

Run · Grow · Transform mix · Run 70% · Grow 20% · Transform 10% [estimate · NEW stream]

OUTCOME

SCADA, EMS, OMS and emerging DERMS/ADMS capabilities operate as one control-room stack — proposed as a NEW Value Stream after the 46-app assessment surfaced this gap.

APPLICATIONS SUPPORTED

- SCADA
- EMS — Energy Management System
- OMS — Outage Management System
- DERMS / ADMS (emerging)
- (5 apps total — IT Networks Assessment Slide 10/23)

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- System Operations control room (24/7)
- Control engineers and reliability operators
- Storm Operations and Emergency Mgmt
- Reliability and grid-modernization initiatives

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead — control-room platform SME
- Business Analyst
- [GAP] confirm sub-team owner with Carlos and Travis

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- GE (SCADA / EMS partner)
- Siemens / ABB (OEM)
- [GAP] confirm primary OMS / DERMS vendor

Avangrid = product owner · vendor = delivery muscle

VALUE STREAM

NTT DATA

C&R CORPORATE & REGULATORY — CORPORATE AND REGULATORY DEMAND ROUTED ONCE, FULFILLED PREDICTABLY

IT Apps · Carlos Garbin · Sarath Garikapati (sub-team lead)

Run · Grow · Transform mix · Run 50% · Grow 35% · Transform 15% [estimate]

OUTCOME

Finance, HR, Procurement and Regulatory IT requests share one product team — no more 5-6 PJMs absorbing demand reactively.

APPLICATIONS SUPPORTED

- SAP Finance
- SAP HR
- SAP Procurement
- Regulatory reporting tooling
- Document management cross-cuts

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- Corporate functions (Finance · HR · Procurement · Legal)
- Regulatory affairs across OPCOs
- Sarath's 5-6 PJM intake (today distributed)
- Iberdrola corporate compliance asks

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead — Amit Patel (Corporate Champion)
- Business Analyst
- PJM pool from Sarath (shared resource)

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- Accenture
- Infosys
- SAP partners (Finance / HR / Procurement)

Avangrid = product owner · vendor = delivery muscle

VALUE STREAM

IBD IBERDROLA CORPORATE SERVICES — AVANGRID IN LOCK-STEP WITH IBERDROLA'S GLOBAL SAP RELEASES

NTT DATA

Cross-branch · Vanessa Colombo (Global SAP / FI / PO / Budget)

Run · Grow · Transform mix · Run 70% · Grow 25% · Transform 5% [estimate · stable cycle]

OUTCOME

Global SAP, FI and budget integrations stay aligned to Iberdrola's release calendar without absorbing local demand variability.

APPLICATIONS SUPPORTED

- Global SAP (Iberdrola template)
- Iberdrola FI integration
- PO / Budget integration
- Global compliance reporting

(KB-confirmed unless flagged [GAP])

DEMAND SOURCES — who sends the work

- Iberdrola corporate (Bilbao)
- Vanessa Colombo's existing intake
- Global SAP release pipeline
- Group-wide finance and budget cycles

Routed via the Jira request type for this Value Stream

AVANGRID CORE TEAM

- Product Manager (NEW)
- Tech Lead — Michael Dubois (Global SAP Champion)
- Business Analyst
- Vanessa Colombo (sub-team lead · cross-link)

≈ 3–5 FTE per Value Stream

VENDOR EXTENSION (delivery)

- Global SAP partners (Iberdrola-managed)
- Iberdrola IT (intra-group dependency)

Avangrid = product owner · vendor = delivery muscle

FORUMS

FIVE CROSS-TEAM COORDINATION VENUES WITH EXPLICIT CADENCES

NTT DATA

REGIONAL FORUM

Quarterly

Per OPCO discussion

- BRS UIL — UI · SCG · CNG · BGC (Connecticut)
- BRS CMP — Central Maine Power
- BRS NY — NYSEG · RGE
- Members: Value Stream PMs + business sponsors per OPCO

FUNCTIONAL FORUM

Bi-weekly

Per role / function

- PM Council (cross-stream Product Managers)
- Tech Lead Council (cross-stream architecture review)
- Project Manager pool review (large-project coordination)
- Members: same role across teams

TECHNOLOGICAL FORUM

Bi-weekly

Per technology stack

- SAP Forum — Local + Iberdrola
- Non-SAP Forum — GIS · Mobility · Document Mgmt
- Platform Forum — DevOps · Security · Test automation
- Members: technical leads + platform owners

CUSTOMER JOURNEY FORUM

Weekly during active initiative

End-to-end customer experience

- M2C Journey — meter → bill → payment
- Self-Service Journey — portal · CRM · Contact Center
- Field Worker Journey — mobility · doc viewer · storm
- Members: PMs + UX + business sponsors

PRODUCT FORUM

Quarterly (Big Room Planning)

Cross-stream product strategy

- BRP cadence with all Value Stream Teams
- Cross-stream roadmap sync
- Trade-off + sequencing decisions at portfolio level
- Members: Directors + PMs + Portfolio Manager

PORTFOLIO ARCHITECTURE

TWO WORK LEVELS — INITIATIVES AT PORTFOLIO · STORIES AT SQUAD

NTT DATA

VP ROLL-UP DASHBOARD

Aggregated view across both portfolios · monthly Portfolio Sync

PORTFOLIO BOARD · Customer Services Applications

3 Value Streams · cards = Initiatives · Owner: Kumar · monthly Portfolio Committee

PORTFOLIO BOARD · IT Business Applications

5 Value Streams · cards = Initiatives · Owner: Carlos · monthly Portfolio Committee

EIGHT TEAM KANBANS · one per Squad · cards = STORIES · five phases × dual track

M2C-SL	M2C-RO	CCC	FOPS	E&A	NOC	C&R	IBD
Service Lifecycle	Revenue Operations	Customer Care	Field Operations	Engineering & Asset	Network Operations	Corporate & Regulatory	Iberdrola Corp
5 phases × 2 tracks Discovery + Delivery	*5 phases* × 2 tracks Discovery + Delivery	*5 phases* × 2 tracks Discovery + Delivery	*5 phases* × 2 tracks Discovery + Delivery	*5 phases* × 2 tracks Discovery + Delivery	*5 phases* × 2 tracks Discovery + Delivery	*5 phases* × 2 tracks Discovery + Delivery	*5 phases* × 2 tracks Discovery + Delivery

EPIC IS OPTIONAL Use Epic only when an Initiative is too large for one quarter (> 3 months) — to slice it into deliverable chunks. Default flow is Initiative → Story.

STEP-LEVEL POLICIES

WHAT HAPPENS AT EACH STAGE AND WHO IS RESPONSIBLE

NTT DATA

PORTFOLIO BOARD · cards = INITIATIVES

Funnel
Idea submitted with problem statement

Owner: Sponsor

Reviewer: Demand Manager

Reviewing
Business case refined · classification applied

Owner: Sponsor + Demand Manager

SLA: 2 weeks

Analyzing
Sized · scored · feasibility checked

Owner: Demand Manager + Architect

Output: Pain Score, T-shirt effort, Class of Service

Approval Gate
Go / No-Go decision

Decider: Director (Carlos / Kumar)

Cadence: monthly Portfolio Committee

Backlog
Approved · awaiting capacity

Owner: Portfolio Manager

Sequencing by Class of Service + score

Implementing
Assigned to Value Stream Team

Owner: Team PM

Tracked at Layer 0 VP Dashboard

Done
Value realized · post-implementation review

Owner: Sponsor + PM

Outcome metrics captured

TEAM KANBAN · cards = EPICS · STORIES

Phase 0 — Discovery
Problem framing · users · hypothesis

Owner: Product Manager

Always-on; supports Materialization

Phase 1 — Materialization
Definition · solutioning · sizing

Owner: Product Manager + Tech Lead

Output: Roadmap, Budget, Sizing

Phase 2 — Creation
Planning · team / vendor assignment

Owner: Product Manager

Output: Outcome definition, KPIs, Strategic alignment

Phase 3 — Ongoing (Kanban + WIP limits)
Build · test · deploy iteratively

Owner: Squad (PM + Tech Lead + BA + dev/QA)

Kanban flow · daily / replenishment / service review · WIP limits per stage

Phase 4 — Maintenance
Hypercare · stabilization · knowledge

Owner: Operations + Tech Lead

Handoff to BAU within 30 days post-launch

Discovery ↔ Delivery handoff
Items move only when DoR is met

Gatekeeper: Product Manager

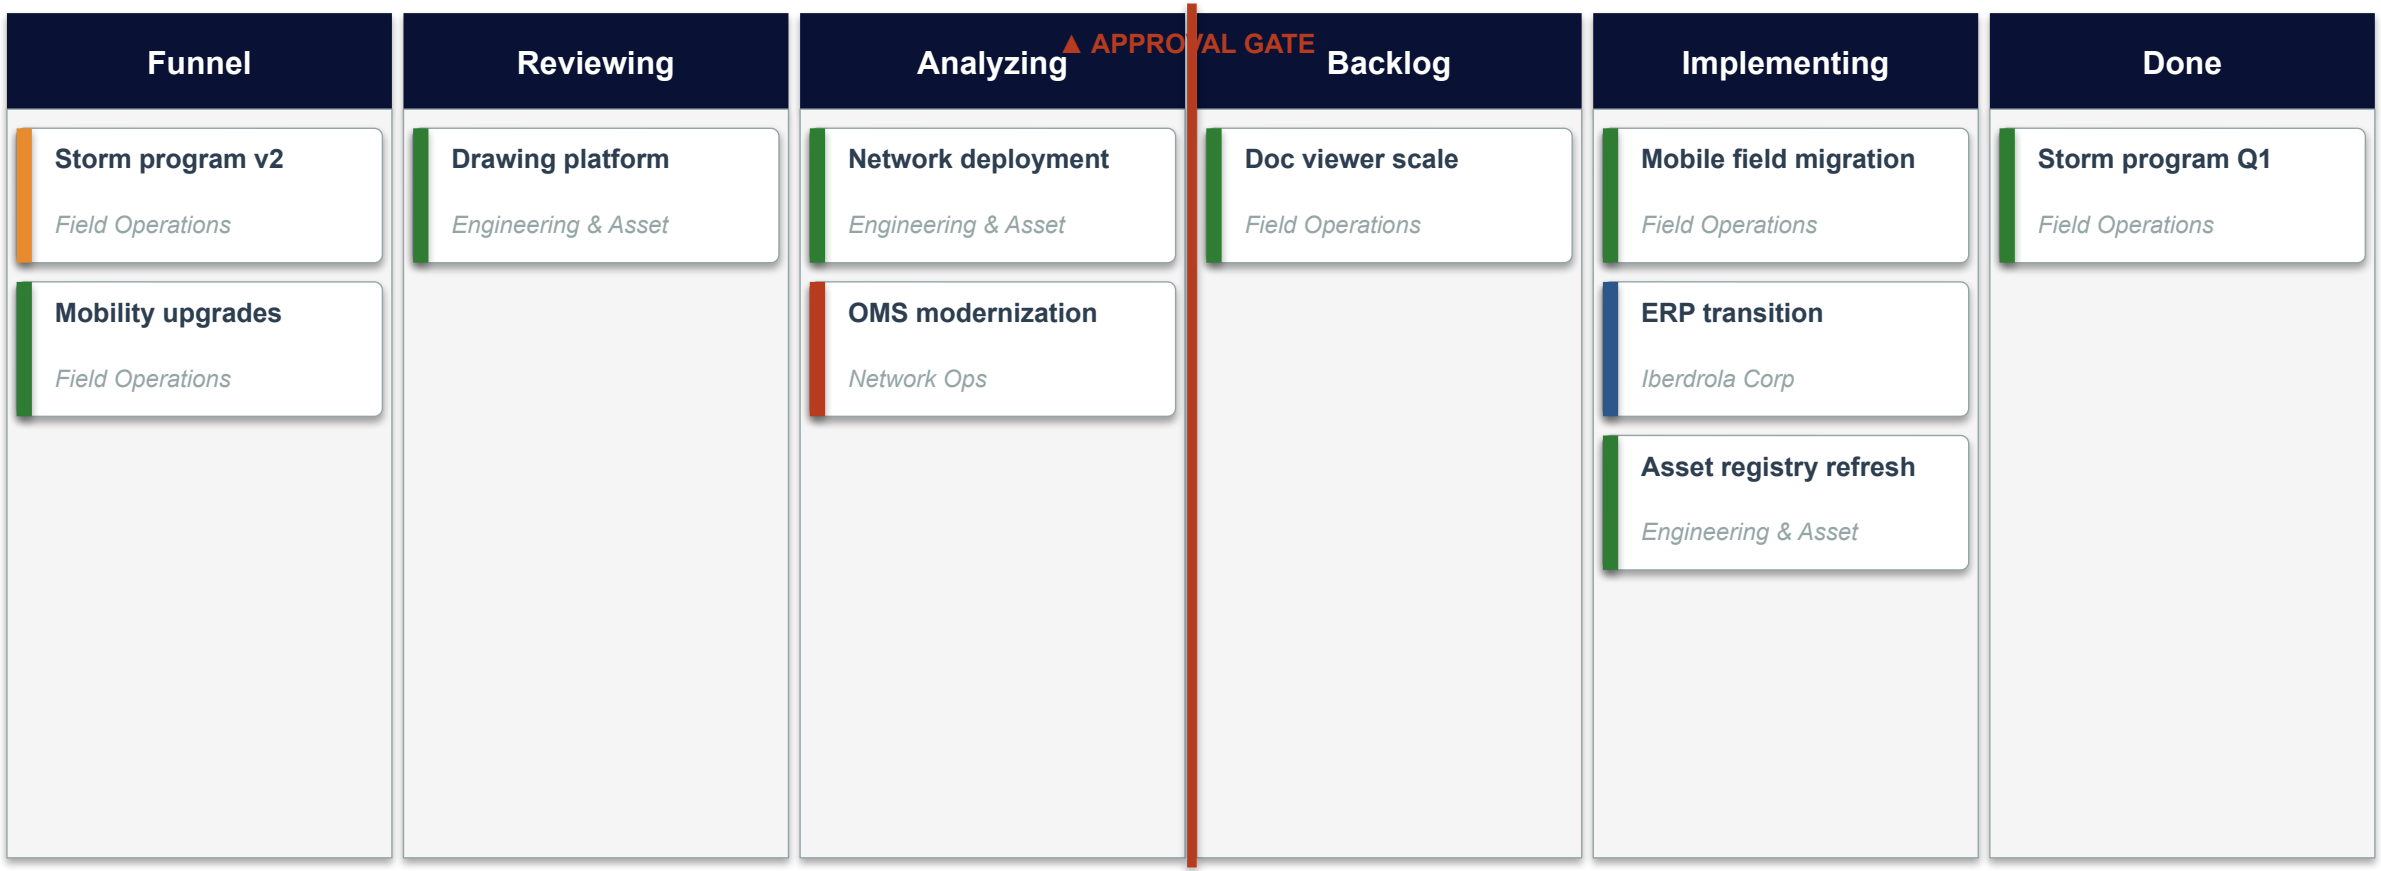

Discovery feeds Delivery continuously

- Expedite
- Intangible

TEAM KANBAN

FIVE PHASES BY TWO TRACKS · CARDS ARE EPICS WITH LINKED STORIES

NTT DATA

Example · Field Operations Team Board · five phases × dual track with WIP limits

EPIC
1-3 months · Initiative breakdown

Story badge
Stories tracked in linked sub-view (Kanban)

Card flow
items move left → right through phases

CLASS OF SERVICE FRAMEWORK

CAPACITY CAPS REPLACE AD-HOC 'URGENT' OVERRIDES

NTT DATA

STANDARD

≈50% baseline

Normal demand flowing through the standard intake gate.

WHEN IT APPLIES

Routine enhancements, planned change, tech debt addressed in cycle.

FIXED-DATE

≈20%

Demand with a hard regulatory or contractual deadline.

WHEN IT APPLIES

Prioritized by date, not by score. Date breach triggers escalation.

EXPEDITE

≤20% · CAPPED

Critical regulatory or safety items requiring fast-track.

WHEN IT APPLIES

Bypasses Gate 1, logged for review at next Portfolio Committee. Cap is enforced.

INTANGIBLE

≈10% reserved

Innovation, research, user-experience exploration.

WHEN IT APPLIES

Protects the strategic-partner positioning beyond pure delivery.

Capacity caps are enforced monthly at the Portfolio Committee · Expedite breach triggers a governance escalation, not a quiet override.

ROADMAP

WAVE 1 IN FIVE STEPS OVER FOURTEEN WEEKS · SCALE IN SUBSEQUENT WAVES

NTT DATA

WAVE 1 · Demand Management Design & Pilot · 14 weeks

Step 1

Weeks 1-2

ENABLEMENT

Where are we starting from?

Stakeholder interviews · prior materials review · portfolio assessment · baseline report

Step 2

Weeks 3-4

DEFINE LIFECYCLE

How should we work?

End-to-end process map · Value Framework v1.0 · Roles & RACI Matrix · Demand Typology

Step 3

Weeks 5-6

DESIGN TOOL ECOSYSTEM

What supports the process?

Jira Configuration v1.0 · Intake Form Design · Portfolio Concept Blueprint

Step 4

Weeks 7-13

PILOT EXECUTION

Does it work in reality?

Execute one Value Stream end-to-end · pilot team training · real-time feedback log

Step 5

Week 14

LEARN & ADJUST

What needs refinement?

Analyze pilot data · refine Jira config v2.0 · adjust Value Scoring · finalize Playbook

WAVE 2 · Scale to remaining Value Stream Teams

Apply validated playbook to next 3-4 teams · refined intake forms · trained Product Managers · ~12 weeks · Q3 2026

WAVE 3 · Steady-state operation

All 8 Value Stream Teams operating model · continuous improvement · Q4 2026 onwards · quarterly Big Room Planning

TO-BE DEMAND FLOW

ONE JIRA FRONT DOOR ROUTES ELEVEN SOURCE AREAS INTO EIGHT VALUE STREAM TEAMS

NTT DATA

Single intake form per Value Stream — every requester opens a Jira card with mandatory fields. The form auto-routes to the right Value Stream Team and applies a Class of Service.

01 · SOURCES

Who sends demand (11 areas)

- BRS (UIL · CMP · NY)
- CX & Digital CoE
- Data & Analytics
- Infrastructure
- IA (Industrial Auto.)
- OT (Operational Tech.)
- Procurement
- Regulatory
- Corporate Areas
- P&T (GIS · Global SAP)
- Gas & Electric Ops

02 · INTAKE FORM (JIRA)

Mandatory fields capture intent

JIRA REQUEST FORM

- **Value Stream destination**
  (routes the card)
- **Demand type**
  Run · Grow · Transform
- **T-shirt size**
  S · M · L · XL
- **Class of Service**
  Standard · Fixed-date · Expedite · Intangible
- **OPCO**
  UIL · CMP · NY · Iberdrola · Cross
- **Business value statement**
  Who benefits and how
- **Sponsor**
  (approves at intake)
- **Pain Score inputs**
  BV · UX · Safety · Effort

IT Now is reserved for incidents only — not for new demand.

03 · VALUE STREAM TEAM

Auto-routed to one of eight

- **M2C — Service Lifecycle**
  Smart Metering / FICA
- **M2C — Revenue Operations**
  Billing / Collection
- **Customer Care & CCC**
  CRM / Contact Center
- **Field Operations**
  GIS / Workforce / OSG
- **Engineering & Asset Mgmt**
  Maintenance / Engineering
- **Network Operations & Control**
  SCADA · EMS · OMS
- **Corporate & Regulatory**
  FI · HR · Procurement · Reg.
- **Iberdrola Corp Services**
  Global SAP · Corp. Apps

04 · CLASS OF SERVICE

Sets cadence and capacity rule

STANDARD

Default flow — pulled by capacity, prioritized by Pain Score.

Bulk of demand · no special policy.

FIXED-DATE

External deadline (regulatory · contractual). Locked sequence.

Slot reserved at portfolio gate.

EXPEDITE — capped ≤20% throughput

Bypass priority for genuine urgency. Sponsor approval logged.

Replaces 'regulatory always wins'.

INTANGIBLE

Tech debt · platform health · spike work.

Reserved 10–15% capacity per quarter.

FUTURE STATE GUIDING PRINCIPLES

THREE PROBLEM AREAS CONVERGE INTO SEVEN STRUCTURAL GAPS

NTT DATA

Our assessment surfaces three connected problem areas — operating constraints, delivery pain points, and structural misalignment — that map to seven structural gaps in the current model.

OPERATING CONSTRAINTS

Structural and operational limitations constraining the model's ability to scale and deliver value consistently.

- People — capacity & accountability are structurally constrained
- Process — lack of standardization drives inconsistency
- Tools — fragmented ecosystem limits visibility and control
- Governance — decision-making is fragmented

DELIVERY EXPERIENCE & PAIN POINTS

Friction points impacting execution and the business or user experience.

- Fragmented demand and intake drive reactive, non-strategic delivery
- Lack of clear product ownership weakens accountability
- Limited portfolio visibility constrains end-to-end planning
- Uncoordinated capacity and overlapping initiatives reduce impact

STRUCTURAL MISALIGNMENT

Misalignment between organizational structure, governance model, and the way products are managed and delivered.

- No Product Entry Point
- No Value-Based Decision-Making
- No End-to-End Product View
- No Ownership of Outcomes
- No Product-Level Steering
- No Common Language of Value
- No Product Ownership Model

▼ ***These problem areas converge into four Guiding Principles for the To-Be model*** ▼

01 DEMAND INTAKE & STRUCTURING

Unified intake layer · single entry point · standard criteria

02 VALUE-BASED PRIORITIZATION

Common scoring · transparent · product-level backlog ownership

03 PRODUCT PORTFOLIO MGMT & PLANNING

Integrated view · capacity at product level · roadmaps

04 PRODUCT GOVERNANCE & OWNERSHIP

Roles defined · product forums · KPIs tied to outcomes
